About this compendium
Crop based recommendations are available from several sources for location specific conditions. However, in rainfed region there are several crops grown in combination or individually at most of the places. Hence, a ready reckoner should provide information not only for growing a healthy crop but also to meet the aberrant weather conditions in that region. At present, districts which contribute to 85% of rainfed groundnut region were identified. Their agro ecological setting, soil and water conservation, crop management including nutrient management, pest management etc., suitable cropping systems, alternate farming systems and contingency plans were described in the background of crop yield gap and runoff of the district. The technologies encompass not only that from All India Coordinated Research Project for Dryland Agriculture (AICRPDA) and National Research Centre for Groundnut (NRCG), but also others from National Agricultural Research System (NARS), State Department(s) of Agriculture and Agro-industries.

GROUNDNUT BASED PRODUCTION SYSTEM

Groundnut (Arachis hypogea L.), an unpredictable legume, may continue to be an important commercial crop in rainfed areas. The crop contributes about 40 percent to the total oilseeds production in the country. At this level of contribution, the projected demand for groundnut by 2020 AD will be about 14 mt. The present production level is around 8.2 mt. Therefore, a gap of about 5.8 mt has to be bridged. This calls for a growth rate of about 2.2 percent per annum, in production. This growth has to come mainly from the increase in productivity. Productivity of groundnut has been showing a positive growth since eighties. At present, average yield in the kharif is around 900 kg/ha and that of in the rabi/summer is around 1500 kg/ha. A fair projection for enhanced productivity with sustainability by 2020 AD will be about 1100 kg/ha (about 22% increase) for kharif groundnut and 2000 kg/ha (about 25 per cent increase) for rabi/summer groundnut. But both production and productivity especially of kharif groundnut have shown highly fluctuating trends.

The erratic trend in productivity, relatively high cost of cultivation, the associated financial risk and non-availability of quality seed in sufficient quantities, have led to a decline in area and production in some traditional groundnut belts including the Saurashtra region of Gujarat, the groundnut bowl of India. This erratic trend in production has affected the groundnut export also. Thus, the high growth rate of 2.35% obtained during the first few years of oilseed mission will be difficult to sustain in the long run especially when contribution from other oilseeds like rapeseed mustard, sunflower and soybean and other oil sources is already a reality. Rain dependent cropping systems have been and may continue to be the mainstay of the future of groundnut agriculture in India. Not more than 20 per cent of the total groundnut area is expected to be under irrigation by 2020 AD, from the existing 17 per cent.

Groundnut is grown in 8.46 mha in 316 districts in 16 selected states. Fifty districts cover 85% of rainfed groundnut of 5.43 mha. The details are -

** Arid, sub-humid and dry sub humid areas

Kharif rainfed groundnut area covers 34 districts. These are – Shihpuri, Khargone, Srikakulam, Vishakhapatnam, Kurnool, Anantapur, Cuddapah, Chittoor, Mahaboobnagar, Nalgonda, Warangal, Kolar, Tumkur, Mysore, Chitrardurga, Dharwad, Belgaum, Bijapur, Nasik, Dhule, Jalgaon, Pune, Satara, Sangli, Kolhapur, Amaravati, Amreli, Bhavnagar, Junagadh, Rajkot, Chittorgarh, Sawaimadhopur, Ganjam and Sambalpur. The nine districts under rabi are Cuddalore (South Arcot), North Arcot, Salem, Tiruchirapalli, Dharmapuri, Erode (Periyar), Puddukottai, Thiruvannamalai (T.Sambuvariar), and Cuttack. The districts covering both kharif and rabi are Bellary, Raichur, Gulbarga, Prakasam and Dhenkenal. Two districts with significant rabi and summer area are Coimbatore and Villupuram.

The trends in area and yield growth rates of groundnut for different districts are given below:

The recommendations on groundnut based production system are given below state and district-wise (except Shivpuri and Srikakulam) in alphabetical order for the regions with low (<12%), medium (12–25%) and high (>25%) surplus index, and low (<33%), medium (33-66%) and high (>66%) yield gap of kharif groundnut. The recommendation are given for 34 districts in 7 states where kharif rainfed groundnut is predominant.
ANDHRA PRADESH

In Andhra Pradesh there is one district viz. Chittoor under low runoff and low yield gap region, six districts viz. Nalgonda, Cuddapah, Kurnool, Anantapur, Mahaboobnagar and Warangal are under low runoff and medium yield gap region, and one district viz. Srikakulam, Vishakhapatnam are under medium runoff and medium yield gap region.

**Agroecological setting**

- **Climate:** Hot moist semi arid
- **Physiography:** Rayalaseema region
- **Soils:** Deep red loamy soils (Alfisols 80%; Aridisols– 20%)
- **Annual rainfall:** 697 mm
- **Potential evapotranspiration:** 1556 mm
- **Moisture availability period:** 120-150 days

**Soil and water conservation:**

- Contour bunding with a cross section of 0.63 m² and with horizontal spacing of 25 m to 125 m is recommended for red soils. The other soil conservation measures like compartment bunds of 15 m length and 10 m width or conservation furrow at 3.6 m interval or intercropping with mixed pulses like cowpea and horsegram can be adopted.
- Integrated watershed management (manage in a < 10 ha watershed)
- Water harvesting inlined with Cuddapah slabs to avoid seepage losses in dug out ponds
- Increasing catchment area and design of pond size for catchment size
- Interplot water harvesting of 1:1 cropped to uncropped area
• Use of life saving irrigation
• Indigenous water harvesting structures to be restored

Crop management

• **Varieties:** TMV-2, Vemana, TPT-4, TPT-2, TPT-1 and JL-24
  • For scarce rainfall in *kharif* – Vemana (K-134), Tirupati-2, TMV-2, JCG-88, Tirupati-1, Tirupati-4
  • For delayed onset of monsoon – Kadiri-4 (K-150)
• **Seed rate:** 100 kg/ha
• **Seed treatment:** Seed treatment with Mancozeb (3g)/ Carbendazim (2g) for one kg of kernals
• **Sowing time:** *kharif* – July
• **Planting pattern:** 30x10 cm
• **Nutrient management:** 20 kg N + 40 kg P₂O₅ + 40 kg K₂O/ha. Reduce to 50% of recommendation if soil test value is medium
  • In Zn deficient soils – apply ZnSO₄ at 25 kg/ha once in three years
• **Pest management:**
  • Root grub: Apply Thimmet or Phorate granules at 10 kg/ha to soil before sowing or treat the seed with chlorpyriphos @ 6 ml/kg seed.
  • Aphids, leaf miner: Spray 0.05% Endosulfan or Dimethoate or Monocrotophos
  • Red hairy caterpillar:
    • Arrange bonfires 2 days after soaking rain from 8.00 PM to 10.00 PM
    • Make a furrow around the field, and apply Carbaryl dust in the furrow
    • For second and third instar larvae spray dimethoate @ 2 ml/l or Monocrotophos @ 1.6 ml/l
    • Poison bait with 10 kg rice bran + 1 kg jaggery + 500 ml Quinolphos can be applied for effective control.

Weed management

• Preplant application of Fluchloralin @3-3.5 l/ha
• Pre-emergence application of (within three days after sowing) Butachlor @4-5 l/ha or Pendimethalin @3.5-5 l/ha
• Mulching with groundnut shells @5 t/ha, 15-20 days after crop emergence.
• Application of antitranspirants like Kaoline or Lime water @ 50 g during drought conditions.
• To recover from drought effect spraying of urea @20 g/l of water

Some other important practices

• Deep ploughing once in three years, where soil depth is 20 cm or more.
• Preparatory cultivation with country plough or “Chekkala guntaka”, a traditional implement increases the yield of groundnut.
• Sand application @ 40 t/ha applied during summer increases the yield of groundnut
• Drought management practices like application of groundnut shells @ 5 t/ha at 10 days after sowing
• Drought tolerant varieties – Girnar -1
• Deep tillage is done for reducing soil borne pests
• Pearl millet act as a barrier for thrips and leaf miner
• Castor act as barrier for *Spodoptera litura, Achoea janata*
• Groundnut + soybean for trapping leaf miner and thrips
• Seed treatment: Carbendazim (Bavistin) 2 g/kg of seeds for seed borne fungi viz., collar rot and stem rot.

**Suitable cropping systems**
• Monocropping of groundnut: In 50% of the rainfed cultivated area
• Groundnut + pigeonpea (7:1 or 11.1)
• Groundnut + castor (7:1 or 11:1)

**Farm implements/ tools:**
• Eenatigorru (bullock drawn, four row): Useful for sowing, seed and fertilizer placement. Suitable for those who have light draft animals (Rs.1500 per unit)
• Seed drill/planter (tractor drawn, nine row): It is a mechanical seed drill. More area can be covered in a day and intra row spacing is maintained (Rs.16000 per unit)
• Ashaguntaka (tractor drawn, seven row): Useful for harvesting of groundnut crop. More field capacity and labour saving (Rs.20000 per unit)
• Groundnut thresher cum decorticator: Useful for separating groundnut pods from haulms. It was found advantageous to thresh groundnut after 3-5 days after harvest. The cost of operation was Rs. 224/ha. It can also be used as decorticator with minor modifications. Perform timely operation and labour saving (Rs.45000 per unit)

**Alternate farming systems**
• Crop + livestock (sheep @ 10/ha) system of farming will give 80% more income than crop system alone.
• **Fodder/ green biomass:** *Dalbergia sissoo, Gliricidia, Albizzia lebbeck, Cassia siamea, Azadirachta indica, stylo, Marvel-8 grass*
• **Fruit:** Ber, Custard apple, Pomegranate, Amla + *kharif* spreading crops
• **Medicinal and aromatic plants:** *Cassia angustifolia, Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium*
• **Vegetables:** Onion, Brinjal, Chillies, Cowpea, Cucumber, Cluster bean, Drumstick.

**Contingent crop planning**
• **Early onset of monsoon**
  Sorghum, greengram, pigeonpea, castor (May – June)
• **Normal onset of monsoon**
  Groundnut, pigeonpea, groundnut + pigeonpea (July)
• **Late onset of monsoon**
  Pearl millet, sorghum, greengram (after August 15th)
• **Very late onset of monsoon**
  Pearl millet, cowpea, horsegram (early September)
Agroecological setting

Anantapur
- **Climate**: Hot arid
- **Physiography**: Rayalaseema region
- **Soils**: Deep loamy and clayey mixed red and black soils (Alfisols - 80%)
- **Annual rainfall**: 497 mm
- **Potential evapotranspiration**: 1858 mm
- **Moisture availability period**: 60-90 days

Cuddapah
- **Climate**: Hot dry semi arid
- **Physiography**: Rayalaseema
- **Soils**: Deep loamy, clayey mixed red and black soils (Alfisols - 60%, Vestic Inceptisols - 40%)
- **Annual rainfall**: 748 mm
- **Potential evapotranspiration**: 1835 mm
- **Moisture availability period**: 80-120 days

Kurnool
- **Climate**: Hot dry semi arid
- **Physiography**: Rayalaseema region
- **Soils**: Deep loamy, clayey mixed red and black soils (Alfisols - 60%; Vertic Inceptisols - 40%)
- **Annual rainfall**: 605 mm
- **Potential evapotranspiration**: 1828 mm
- **Moisture availability period**: 80-120 days

Mahaboobnagar
- **Climate**: Hot moist semi arid
- **Physiography**: North Telangana
- **Soils**: Deep loamy, clayey mixed red and black soils (Vertisols-40%; Vertic Inceptisols-20%; Alfisols-40%)
- **Annual rainfall**: 792 mm
- **Potential evapotranspiration**: 1678 mm
- **Moisture availability period**: 120-150 days
Nalgonda

- **Climate**: Hot moist semi arid
- **Physiography**: North Telangana
- **Soils**: Deep loamy, clayey mixed red and black soils (Alfisols 100%)
- **Annual rainfall**: 763 mm
- **Potential evapotranspiration**: 1761 mm
- **Moisture availability period**: 120-150 days

Warangal

- **Climate**: Hot moist semi arid
- **Physiography**: North Telangana
- **Soils**: Deep loamy, clayey mixed red and black soils (Alfisols–40%; Vertic Inceptisols–35%; Orthids–25%)
- **Annual rainfall**: 925 mm
- **Potential evapotranspiration**: 1790 mm
- **Moisture availability period**: 120-150 days

**Soil and water conservation:**

**Anantapur, Cuddapah, Kurnool**

- Contour bunds, graded bunds
- Contour bunding with a cross section of 0.63 m$^2$ and with horizontal spacing of 25 to 125 m is recommended for red soils. The other soil conservation measures like compartment bunds of 15 m length and 10 m width or conservation furrow at 3.6 m interval or intercropping with mixed pulses like cowpea and horsegram can be adopted.
- Integrated watershed management (manage in a <10 ha watershed)
- Water harvesting inline with cuddapah slabs to avoid seepage losses in dug out ponds
- Increasing catchment area and design of pond size for catchment size
- Interplot water harvesting of 1:1 cropped to uncropped area
- Use of life saving irrigation
- Indigenous water harvesting structures

**Mahaboobnagar, Warangal**

- Inter-plot water harvesting of 1:1 cropped to uncropped land

Nalgonda

- Ridges and furrows

**Crop management**

**Anantapur, Cuddapah, Kurnool**

- **Varieties**: TMV-2, Vedanta, and TPT–4, TPT-2, TPT-1 and JL-24
  - For scarce rainfall in *kharif* – Vemana (K-134), Tirupati–2, TMV-2, JCG–88, Tirupati–1, Tirupati–4
  - For delayed onset of monsoon – Kadiri-4 (K-150)
• **Seed rate:** 100 kg/ha
• **Sowing time:** *kharif* – July
• **Seed treatment:** Seed treatment with Mancozeb (3g)/ Carbendazim (2 g) for one kg of kernals
• **Planting pattern:** 30x10 cm
• **Nutrient management:**
  - 20 kg N + 40 kg P₂O₅ + 40 kg K₂O/ha. Reduce to 50% of recommendation if soil test value is medium
  - 20 kg N + 40 kg P₂O₅ + 50 kg K₂O + 500 kg gypsum + 25 kg ZnSO₄ (for Zn deficient soils) for every three years of groundnut crop + farm yard manure @ 10-12 t/ha. N, P and K as basal. Apply gypsum in rows near to base of the plants after weeding at first flowering. Gypsum application should be completed before 45 DAS / before second weeding.
  - In Zn deficient soils – apply ZnSO₄ 25 kg/ha once in three years
• **Pest Management:**
  - Weed control: Hand weeding at 20 and 40 days after sowing + pendimethalin at 50 days after sowing as post emergence @ 0.5 kg a.i/ha
  - Root grub: Apply Thimmet or Phorate granules at 10 kg/ha to soil before sowing or treat the seed with chlorpyriphos @ 6 ml/kg seed.
  - Aphids, leaf miner: Spray 0.05% Endosulfan or Dimethoate or Monocrotophos
  - Red hairy caterpillar:
    - Arrange bonfires 2 days after soaking rain from 8.00 PM to 10.00 PM
    - Make a furrow around the field, and apply Carbaryl dust in the furrow
    - For second and third instar larvae, spray dimethoate @ 2 ml/l or Monocrotophos @ 1.6 ml/l
    - Poison bait with 10 kg rice bran + 1 kg jaggery + 500 ml Quinolphos can be applied for effective control.

**Weed management**

**Anantapur, Cuddapah, Kurnool**

• Preplant application of Fluchloralin @3-3.5 l/ha
• Pre-emergence application of (within three days after sowing) Butachlor @4-5 l/ha or Pendimethalin @3.5-5 l/ha
• Mulching with groundnut shells @5 t/ha, 15-20 days after crop emergence.
• Application of antitranspirants like Kaoline or Lime water @ 50 g during drought conditions.
• To recover from drought effect spraying of urea @20 g/l of water

**Some other important practices**

• Deep ploughing once in three years, where soil depth is 40 cm or more.
• Preparatory cultivation with country plough or “Chekkala guntaka”, a traditional implement increases the yield of groundnut.
• Sand application @ 40 t/ha applied during summer increases the yield of groundnut
• In Alfisols – 100 % RDF (50% organic + 50% inorganic), 50% recommended N (40 kg/ha glyricidia as half basal + half top dressing)
• In groundnut–castor rotation – 25% N (compost) + 75% N (inorganic)
• LCC VI – custard apple (4.5x4.5 m), Ber (6x6 m), Soapnut (6x6 m), Tamarind (9x9 m)
• For breaking seed dormancy treat with 0.05 % (5 ml/10l water) Etheryl (plant hormone). Soak kernals in Etheryl solution for 12 hrs and shade dry before sowing.
Crop substitution – groundnut substituted with pigeonpea, castor, pearl millet and sorghum
Crop rotation – *kharif* groundnut – greengram/ horsegram where Northeast monsoon is assured.
Drought tolerant varieties – Girnar-1
Deep tillage is done for reducing soil borne pest
Pearl millet acts as a barrier for thrips and leaf miner
Castor acts as a barrier for *spodoptera litura*, *Achoea janata*
Groundnut + soybean for trapping leaf miner, thrips
Seed treatment: Carbendazim (Bavistin) 2 kg of seeds for seed borne fungi viz., collar rot and stem rot.
Seed treatment with Mancozeb (3 g)/ Carbendazim (2 g) for 1 kg of kernels

**Cultural practices**
Soil amendment with castor cake @ 500 kg/ha (preferably 15 days before sowing) for soil borne diseases like stem rot and collar rot.
Intercropping of groundnut with pigeonpea/ pearl millet/ sorghum (3:1) depending upon the locally recommended intercrops against foliar fungal diseases (early and late leaf spots, rust) and insect pests (leaf miner and thrips)
Use of trap crops such as cowpea/ soybean (leaf miner and leaf hoppers)/ castor (Spodoptera and leaf hoppers) as border crops for sucking/ defoliating insects.
One hand weeding at 30-35 days after sowing after the application of pre-emergence weedicide Fluchloralin @ 1.5 kg a.i./ha

**Mahaboobnagar, Nalgonda, Warangal**

**Varieties:** JL-24

**Seed rate:** 100 kg/ ha

**Seed treatment:** Seed treatment with Mancozeb (4 g)/ Carbendazim (2 g) for one kg of kernals

**Planting pattern:** 30x10 cm

**Nutrient management:** 20 kg N + 40 kg P₂O₅ + 40 kg K₂O/ha.
- In Zn deficient soils – apply ZnSO₄ 25 kg/ha once in three years
- 50% recommended dose of fertilizer + Farm yard manure 5 t/ha in sequence crops

**Pest management:**
Root grub: Apply Thimmet or Phorate granules at 10 kg/ha to soil before sowing or treat the seed with Chlorpyriphos @ 6 ml/kg seed.
Aphids, leaf miner: Spray 0.05% Endosulfan or Dimethoate or monocrotophos
Red hairy caterpillar:
- Arrange bonfires 2 days after soaking rain from 8.00 PM to 10.00 PM
- Make a furrow around the field, and apply carbaryl dust in the furrow
- For second and third instar larvae, spray Dimethoate @ 2 ml/l or Monocrotophos @ 1.6 ml/l
- Poison bait with 10 kg rice bran + 1 kg jaggery + 500 ml Quinolphos can be applied for effective control.
Late leaf spot: Spray Mancozeb 2 g + Carbendazim 1 g/l or Hexaconazole @ 2 ml/l. Spraying can be taken up based on leaf wetness at 70 days after sowing. There is no need to spray for July sown crop.
Stem necrosis: Removal of weeds particularly Parthenium on the bunds and in the field.
Weed management:

**Mahaboobnagar, Nalgonda, Warangal**
- Preplant application of Fluchloralin @3-3.5 l/ha
- Pre-emergence application of (within three days after sowing) Butachlor @4-5 l/ha or Pendimethalin @3.5-5 l/ha
- Mulching with groundnut shells @5 t/ha, 15-20 days after crop emergence.
- Application of antitranspirants like Kaoline or Lime water @ 50 g during drought conditions.
- To recover from drought effect spraying of urea @20 g/l of water

**Some other important practices**
- Drought tolerant varieties – Girnar–1
- Deep tillage is done for reducing soil borne pest
- Pearlmillet acts as a barrier for thrips and leaf miner
- Castor acts as a barrier for *Spodoptera litura, Achoea janata*
- Groundnut + soybean for trapping leaf miner, thrips
- Seed treatment: Carbendazim (Bavistin) 2 g/kg of seeds for seed borne fungi viz., collar rot and stem rot.
- Seed treatment with Mancozeb (3 g)/ Carbendazim (2 g) for 1 kg of kernels

**Suitable cropping systems**

**Anantapur, Cuddapah, Kurnool**
- Monocropping of groundnut: In 50% of the area.
- Groundnut + pigeonpea (7:1 or 11:1)
- Groundnut + castor (7:1 or 11:1)
- Groundnut + pearlmillet (6:2)

**Mahaboobnagar, Nalgonda, Warangal**
- Groundnut + pigeonpea (7: 1)
- Groundnut + castor (7:1 or 11:1)

**Farm implements/ tools:**

**Anantapur, Cuddapah, Kurnool**
- Eenatigorr (bullock drawn, four row): Useful for sowing, seed and fertilizer placement. Suitable for those who have light draft animals: (Rs.1500 per unit)
- Seed drill/planter (tractor drawn, nine row): It is a mechanical seed drill. More area can covered in a day and intra row spacing is maintained (Rs.16000 per unit)
- Ashaguntaka (tractor drawn, seven row): Useful for harvesting of groundnut crop. More field capacity and labour saving (Rs.20000 per unit)
- Groundnut thresher cum decorticator: Useful for separating groundnut pods from haulms. It was found advantageous to thresh groundnut after 3-5 days after harvest. The cost of operation was Rs. 224/ha. It can also be used as decorticator with minor modifications. Perform timely operation and labour saving (Rs.45000 per unit)
• APAU groundnut seed cum fertilizer drill (three row – animal drawn)
• CRIDA seed cum fertilizer drill (four row – animal drawn)
• Groundnut thresher

Mahaboobnagar, Nalgonda, Warangal
• Bullock drawn two-row sweep cultivator
• Modified two-row blade harrow
• Bullock drawn country plough attached with Pora tube

Alternate farming systems
Anantapur, Cuddapah, Kurnool
• Fodder/green biomass: Dalbergia sissoo, Gliricidia, Albizia lebbeck, Cassia siamea, Azadirachta indica/ stylo, Marvel-8 grass
• Fruit: Ber, Custard apple, Pomegranate, Amla + kharif spreading crops
• Medicinal and aromatic plants: Cassia angustifolia, Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium
• Vegetables: Onion, Brinjal, Chillies, Cowpea, Cucumber, Cluster bean, Drumstick.
• Crop + livestock (sheep @ 10/ha) system of farming will give 80% more income than crop system alone.

Mahaboobnagar, Nalgonda, Warangal
• Parkland systems: Azadirachta indica, Acacia nilotica, Tamarindus indica
• Trees on bunds: Tectona grandis, Leucaena leucocephala, Borassus flabellifera, Cocos nucifera, Acacia nilotica var. cupressiformis
• Silvipastoral system: Leucaena leucocephala + Styllosanthes hamata, Leucaena leucocephala + Cenchrus + ciliaris
• Alley cropping: Leucaena leucocephala + sorghum/ pearlmillet, Gliricidia sepium + sorghum/ pearlmillet
• Agrohorti system: Mango + short duration pulses
• Fruit: Mango, Ber, Custard apple, Guava, Pomegranate, Amla
• Fodder/green biomass: Leucaena leucocephala. Azadirachta indica, Albizzia lebbeck, Bauhinia purpurea, A. procera, B.monosperma, A.amara, Dalbergia sissoo
• Medicinal and aromatic plants: Catharanthus roseus, Cassia angustifolia, Aloe barbadensis, Withia somnifera, Cymbopogan martini, Cymbopogan flexuosus, P rosalea, Palma rosa, Vetiveria zizanoides
• Dye yielding plants: Lawsonia inermis, Hibiscus sabdarifff, Tagetes erecta, Indigofera tinctoria, Annato
• Other economic shrubs: Curry leaf, Jatropha, Soapnut
• Animal component: Female cattle, Female buffaloes, Male cattle, Sheep and Goat
• Other enterprises: Sericulture, Poultry
Contingent crop planning

Anantapur, Cuddapah, Kurnool

- Early onset of monsoon (last week of May or June): Sorghum (CSH-5), greengram, pigeonpea (PDM-1), castor (Aruna, GAUCH–1), mesta (AMV–1)
- Normal onset of monsoon (July): Groundnut, pigeonpea (TMV-2,J-11), groundnut + pigeonpea, castor (Aruna, GAUCH–1), mesta (AMV–1), setaria, pearlmillet (MBH–110, MH-88), greengram
- Late onset of monsoon (August): Sorghum, greengram (after August 15th), pearlmillet (MBH–110), setaria, groundnut (TMV–2)
- Very late onset of monsoon (September): Cowpea, horsegram (early September), pearlmillet (MBH–110), horsegram (Anantapur local, BGM)

Mahaboobnagar, Nalgonda

- June: Normal onset of monsoon
  - Sole crop: Sorghum (CSH 5, CSH-6, CSH-9), pearlmillet (MBH 110)
  - Intercrop:
    - Sorghum - pigeonpea (2:1)
    - Pearlmillet + pigeonpea (2:1) in 45 cm row spacing. Pigeonpea duration of 150-180 days may be used.
- July: Late onset of monsoon
  - Sow castor (Aruna, GAUCH-1)
  - Sole crop: Pearlmillet (MBH-100), Bunch variety of groundnut (TMV-2, JL-24)
  - Intercrop: Maize (DHM-101, Ganga-5)
    - Maize + pigeonpea (2:1) at 50 cm spacing. Pigeonpea duration of 180-200 days
- August: Very late onset of monsoon
  - Sole crop: Setaria (H-1, Arjuna) for grain to poultry feed and straw for fodder
  - Castor (Aruna, GAUCH-1) with increased seed rate (15 kg/ ha)

Warangal

For Red soils

- June: Normal onset of monsoon
  - Sole crop: Sorghum (CSH 5, CSH-6, CSH-9), pearlmillet (MBH 110)
  - Intercrop:
    - Sorghum - pigeonpea (2:1)
    - Pearlmillet + pigeonpea (2:1) in 45 cm row spacing. Pigeonpea duration of 150-180 days may be used.
- July: Late onset of monsoon
  - Sow castor (Aruna, GAUCH-1)
  - Sole crop: Pearlmillet (MBH-100), (Bunch variety of groundnut (TMV-2, JL-24)
  - Intercrop: Maize (DHM-101, Ganga-5)
    - Maize + pigeonpea (2:1) at 50 cm spacing. Pigeonpea duration of 180-200 days
- August: Very late onset of monsoon
  - Sole crop: Setaria (H-1, Arjuna) for grain to poultry feed and straw for fodder
  - Castor (Aruna, GAUCH-1) with increased seed rate (15 kg/ ha)
For Black soils
First crop
- June:
  - Sorghum (CSH-5, CSH-6)
  - Maize: (Ganga 5, DHM-101)
  - Greengram (PS-16, HB-45, LRG–30)
- July:
  - Maize (Ganga 5, DHM-101)
  - Greengram (PS-16, HB-45, LRG–30)
Second crop
- September:
  - *Maghi* sorghum (Moti, CSH-6)
  - Safflower: (Manjira)
- October:
  - Safflower: (Manjira)
  - Chickpea (Jyothi)

</table>

Agroecological setting

**Srikakulam**
- **Climate:** Hot dry subhumid
- **Physiography:** Eastern coastal plain / Eastern ghats
- **Soils:** Medium to deep loamy red and lateritic soils/deep loamy to clayey coastal and deltaic alluvium derived soils
- **Annual rainfall:** 1104 mm
- **Potential evapotranspiration:** 1560 mm
- **Moisture availability period:** 180-210 days

**Vishakhapatnam**
- **Climate:** Hot (moist/ dry) sub humid
- **Physiography:** Eastern ghats
- **Soils:** Medium to deep loamy red and lateritic, deep loamy to clayey coastal and deltaic alluvium derived soils (Aridisols – 50%; Alfisols – 50%)
- **Annual rainfall:** 975 mm
- **Potential evapotranspiration:** 1480 mm
- **Moisture availability period:** 180-210 days

Soil and water conservation:

**Srikakulam, Vishakhapatnam**
- Sowing across the slope and ridging later
- Contour farming
- Graded border strips
• Water harvesting structures
• Life saving irrigation

**Crop management**

**Srikakulam, Vishakhapatnam**

• **Varieties:** JL-24
• **Seed rate:** 100 kg/ha
• **Sowing time:** kharif – July
• **Seed treatment:** Seed treatment with Mancozeb (3 g)/ Carbendazim (2 g) for one kg of kernals
• **Planting pattern:** 30 X 10 cm
• **Nutrient management:** 20 kg N + 40 kg P₂O₅+ 40 kg K₂O/ ha.
  • In Zn deficient soils – apply ZnSO₄ 25 kg/ha once in three years
• **Pest management:**
  • Root grubs: Apply Thimmet or Phorate granules at 10 kg/ha to soil before sowing or treat the seed with Chlorpyriphos @ 6 ml/kg seed.
  • Aphids, leaf miner: Spray 0.05% Endosulfan or Dimethoate or Monocrotophos
  • Red hairy caterpillar:
    • Arrange bonfires 2 days after soaking rain from 8.00 PM to 10.00 PM
    • Make a furrow around the field, and apply Carbaryl dust in the furrow
    • For second and third instar larvae spray Dimethoate @ 2 ml/l or Monocrotophos @ 1.6 ml/l
    • Poison bait with 10 kg rice bran + 1 kg jaggery + 500 ml Quinolphos can be applied for effective control.

**Weed management:**

**Srikakulam, Vishakhapatnam**

• Preplant application of Fluchloralin @3-3.5 l/ha
• Pre-emergence application of (within three days after sowing) Butachlor @4-5 l/ha or Pendimethalin @3.5-5 l/ha
• Mulching with groundnut shells @5 t/ha, 15-20 days after crop emergence.
• Application of antitranspirants like Kaoline or Lime water @ 50 g during drought conditions.
• To recover from drought effect spraying of urea @20 g/l of water

**Some other important practices**

• Drought tolerant varieties – Girnar–1
• Deep tillage is done for reducing soil borne pest
• Pearl millet act as a barrier for thrips and leaf miner
• Castor act as barrier for *Spodoptera litura, Achoea janata*
• Groundnut + soybean for trapping leaf miner, thrips
• Seed treatment with Mancozeb (3 g)/ Carbendazim (1 g) for 1kg of kernels

**Suitable cropping systems**

**Srikakulam, Vishakhapatnam**

• Groundnut + pigeonpea (7: 1)
• Groundnut + castor (7:1 or 11:1)
Farm implements/ tools:
Srikakulam, Vishakhapatnam
- CRIDA groundnut planter (four row)
- Bullock drawn two-row sweep cultivator
- Modified two-row blade harrow
- Bullock drawn country plough attached with Pora tube

Alternate farming systems
Srikakulam, Vishakhapatnam
- Fodder/ green biomass: Albizia lebbeck, Dalbergia sissoo, Subabul, Azadirachta indica, Hardwickia binata, Acacia albida
- Fruit: Custard apple, Tamarind, Jamun, Mango, Ber
- Medicinal/ Aromatic Plants: Cassia angustifolia, Catharanthus roseus, Plantago ovata, Palma rosa, Vetiveria zizanoides
- Vegetables: Cluster bean, Drumstick, Cucumber, Cowpea, Ridge gourd, Round melon, Okra, Watermelon
- Animal Component: Male/ Female cattle, Female buffaloes, Sheep, Goat, Poultry
GUJARAT

In Gujarat there is one district viz. Rajkot under low runoff and high yield gap region and three districts viz. Junagadh, Bhavnagar and Amreli under low runoff and medium yield gap region.

Agroecological setting

Amreli

- **Climate:** Hot dry/moist semi arid
- **Physiography:** Kathiawad
- **Soils:** Shallow and medium loamy to clayey black soils, deep black soils, deep loamy coastal alluvium derived soils (Aridisols–100%)
- **Annual rainfall:** 607 mm
- **Potential evapotranspiration:** 1877 mm
- **Moisture availability period:** 90-150 days

Bhavnagar

- **Climate:** Hot moist/dry semi arid
- **Physiography:** Coastal Kathiawad peninsula
- **Soils:** Deep loamy grey brown and alluvium - derived soils, shallow and medium loamy to clayey black soils, deep black soils, deep loamy coastal alluvium - derived soils (Aridisols–75%; Vertic Inceptisols–25%)
• **Annual rainfall:** 602 mm
• **Potential evapotranspiration:** 1814 mm
• **Moisture availability period:** 90-150 days

**Junagadh**

• **Climate:** Hot dry/ moist semi arid
• **Physiography:** Central Kathiawad peninsula
• **Soils:** Shallow and medium loamy to clayey black soils, deep black soils and deep loamy coastal alluvium-derived soils (Aridisols-50%; Vertic Inceptisols-50%)
• **Annual rainfall:** 702 mm
• **Potential evapotranspiration:** 1684 mm
• **Moisture availability period:** 90-150 days

**Soil and water conservation**

Amreli, Bhavnagar, Junagadh

• Shallow ploughing before sowing and ridging
• Furrowing 25 days after sowing
• *Insitu* moisture conservation measures like mulching, tillage, conservation furrows etc.
• Indigenous water harvesting structures wherever topography permits

**Crop management**

Amreli, Bhavnagar, Junagadh

• **Varieties:**
  • Bunch- GG-5, GG-7, GG-2 – are suitable for inter cropping systems
  • Semi spreading: GG-20
  • Spreading: GAUG-10, GG-11, and GG-13

• **Seed rate:**
  • Bunch- 100 kg/ha
  • Semi spreading: 100 kg/ha
  • Spreading: 80-100 kg/ha

• **Planting pattern:** Bunch- 45x10 cm
  • Semi spreading: 60x10 cm
  • Spreading: 75x10 cm

• **Nutrient management**
  • 12.5 kg N + 25 kg P₂O₅/ha
  • All nutrients to be applied as basal
  • In Zn deficient soils – apply ZnSO₄ 25 kg/ha once in three years

• **Pest management**
  • White grub:
    • Soil application of Lindane 0.65% dust @ 12.5 kg/ha before sowing
• Spray of Carbaryl 0.2% should be applied on trees located around the field and arrange the light trap for attraction of adults
• Ploughing of field for exposure of white grubs to predatory birds
• Seed treatment with Quinolphos 25 EC or Chlorpyriphos 25 EC @ 20 ml/kg seeds. The treated seed should be dried

**Helicoverpa:**
• For spray of HNPV suspension @ 250 LE/ha at five days interval, starting from initiation of the pest
• Aphids, Jassids, Thrips and *Helicoverpa*:
  • First spray: Phosphamidon 0.03%, two weeks after first notice of winged aphid on stick traps
  • Second spray: Dimethoate 0.03% one month after first spray
  • Third spray: Endosulfan 0.07% after 15 days of second spray if *Helicoverpa* infestation is high
• Groundnut pod borer, *Penthicoides seriatoporus*: control measures
  • Soil application of the granular insecticide, Cartap hydrochloride 4g @ 10 kg/ha at 55 to 65 days after sowing is recommended for effective and economic control for pod borer *Penthicoides seriatoporus* familiar in groundnut crop grown under rainfed conditions of North Saurashtra agroclimatic zone

**Weed management:**
**Amreli, Bhavnagar, Junagadh**
• Pre emergence application of Fluchloralin @1.0 kg (a.i)/ha or pendimethalin @1.0kg (a.i)/ha or Alachlor @1.0kg a.i./ha or Metachlor @1.0 kg a.i./ha

**Disease control in groundnut**
• Collar rot: Seed treatment with Carbendazim @ 2 g/kg seed
• Tikka: Spray Carbendazim (0.025%) @ 150 g ai/ha
• Rust: Spray Mancozeb (0.2%) @ 1.2 kg ai/ha

**Some other important practices**
• Application of life saving irrigation at pegging and pod-development stages of groundnut
• Apply borax @ 2 kg/ha as soil application at the time of sowing where soils are deficient in boron
• Deep tillage is done for reducing soil borne pest
• Pearlmillett act as a barrier for thrips and leaf miner
• Castor acts as barrier for *Spodoptera litura, Achoea janata*
• Groundnut + soybean for trapping leaf miner, thrips
• Cultural practices
  • Soil amendment with castor cake @ 500 kg/ha (preferably 15 days before sowing) for soil borne diseases like stem rot and collar rot
  • Intercropping of groundnut with pigeonpea/ pearlmillet/ sorghum (3:1) depending upon the locally recommended intercrops against foliar fungal diseases (early and late leaf spots, rust) and insect pests (leaf miner and thrips)
  • Use of trap crops such as cowpea/ soybean (leaf miner and leaf hoppers)/ castor (*Spodoptera* and leaf hoppers) as border crops for sucking/ defoliating insects
  • One hand weeding at 30-35 days after sowing after the application of pre-emergence weedicide Fluchloralin @ 1.5 kg a.i./ha

**Suitable cropping systems**
• Groundnut + castor (GCH-4) (3:1)
• Groundnut + pigeonpea (BDN-2) (3:1)
Farm implements/ tools:
Amreli, Bhavnagar, Junagadh
- Seed cum fertilizer drilling attachment (Bullock drawn): Three operations i.e. fertiliser drilling, seed drilling and covering at time. Rs. 3500/-
- Seed cum fertilizer drilling attachment (Tractor drawn): Three operations i.e. fertiliser drilling, seed drilling and covering at time. Rs.13,680/-
- Tractor mounted power sprayer: Uniform and efficient spraying to cover large area. Of 1.8 ha./hours. Rs.50,000/-
- Bullock drawn multipurpose tool bar: Sowing, interculturing, Earthing up and harvesting. Rs.1800/-
- Groundnut thresher: Threshing of Groundnut. Rs.15000/-
- Sub soiler: For deep ploughing and moisture conservation. Rs.8000/-
- M.B.Plough: To pulverize the soil and for deep ploughing. Rs.10,000/-

Alternate farming systems:
Amreli, Bhavnagar, Junagadh
- Fodder/ green biomass: *Dichrostachys cinerea, Albizzia lebbeck, Leucaena leucocephala and Pongamia pinnata*
  - On slopy fallow lands with shallow soils – *Dicanthium annulatum*; rows of groundnut (GG-2) in alleys of perennial pigeonpea (ICPL-185); 16 rows of groundnut (GG-2) in alleys of subabul (Hawai gaint)
- Fruit: Custard apple, Mango, Pomegranate, Phalsa, Fig, Jamun, Tamarind
- Medicinal and aromatic plants: *Plantago ovata, Cassia angustifolia, Liquorice.*
- Vegetables: Cowpea, Cluster bean, Brinjal, Okra, Long melon, Drumstick.
- Animal component: Female/ Male cattle, Female buffaloes, Sheep, Goat

Contingent planning
Amreli, Bhavnagar, Junagadh
Delay in monsoon by
- 15th July to 31st July:
  - Grow erect groundnut (GG-2, GG-5, GG-7), sesame (G-Sesame-1, G.Sesame-2), castor (GAUCH-1), Hybrid pearl millet (GHB-235, GHB-316, GHB-558), greengram (K-851, GM-4), blackgram (T-9, TPU-4), pigeonpea (ICPL-87, BDN2, GT-100)
- 1st August to 14th August:
  - Grow pulses blackgram (T-9, TPU-4), forage maize/ sorghum (Gundri, GFS-5), castor (GAUCH-1, GC-2) and sesame (Purva-1)
- 15th August to 31st August:
  - Grow forage maize/ sorghum (Gundri, GFS-5), sesame (Purva-1)

Drought spell after normal sowing
- 1-2 weeks after sowing:
Resowing of early duration varieties or alternate crops should be recommended as under, if sufficient rainfall is received. Hybrid pearlmillet (GHB-235, GHB-316, GHB-558), sorghum (GJ-39, J-41), sesame (G.Sesame-1, G-Sesame-2), castor (GAUCH-1, GC-2), blackgram (T-9, TPU-4)

3-5 weeks after sowing:
- Agricultural operations like interculturing, weeding, hoeing and mulching may be taken up, if drought spell prolongs for two weeks or more weeks.

Early withdrawal of monsoon
- Give life saving irrigation
- Minimize moisture losses through complete removal of weeds
- Perform interculturing to conserve soil moisture
- Harvest the crop according to maturity of crop duration
- Thin the plant population

Satisfactory late rains during September - October
- Relay cropping of castor, sunflower, sesame (Purva-1) and fodder sorghum
- Second crops like rapeseed mustard and chickpea could be taken
- Ratooning of sorghum

Agroecological setting
- **Climate:** Hot arid/ Hot dry semi arid
- **Physiography:** North Kathiawad
- **Soils:** Deep loamy saline and alkaline soils, deep loamy grey brown and alluvium - derived soils, shallow and medium loamy to clayey black soils, deep black soils (Vertic Inceptisols–80%; Vertisols–20%)
- **Annual rainfall:** 674 mm
- **Potential evapotranspiration:** 2144 mm
- **Moisture availability period:** 60-120 days

Soil and water conservation
- Shallow ploughing before sowing and ridging
- Furrowing 25 days after sowing
- *In situ* moisture conservation measures like mulching, tillage conservation furrows etc.
- Indigenous water harvesting structures wherever topography permits

Crop management
- **Varieties:**
  - Bunch: GG-5, GG-7, GG-2
  - Semi spreading: GG-20
  - Spreading: GAUG-10, GG-11, GG-13
• Seed rate:
  • Bunch- 100 kg/ha
  • Semi spreading: 100 kg/ha
  • Spreading: 80-100 kg/ha

• Planting pattern:
  • Bunch- 45x10 cm
  • Semi spreading: 65x10 cm
  • Spreading: 75x10 cm

• Nutrient management
  • 12.5 kg N + 25 kg P₂O₅/ha. All nutrients to be applied as basal
  • 50% recommended dose of fertilizer (6.25 kg N + 12.5 kg P₂O₅/ha) + rhizobium and phosphorus solubulising microorganisms in Arid vertisols
  • Subabul loppings 5t/ha/ farm yard manure 6t/ha + recommended dose of fertilizer (12.5 kg N + 25 kg P₂O₅)
  • In Zn deficient soils – apply ZnSO₄ 25 kg/ha once in three years

• Pest management
  • White grub:
    • Soil application of Lindane 0.65% dust @ 12.5 kg/ha before sowing
    • Spray of Carbaryl 0.2% should be applied on trees located around the field and arrange the light trap for attraction of adults
    • Ploughing of field for exposure of white grubs to predatory birds
    • Seed treatments with Quinolphos 25 EC or Chlorpyriphos 25 EC @ 20 ml/kg seeds. The treated seed should be dried

  • Helicoverpa: For spray of HNPV suspension @ 250 LE/ha at five days interval, starting from initiation of the pest

  • Aphid, Jassid, Thrips and Helicoverpa:
    • First spray: Phosphamidon 0.03%, two weeks after first notice of winged aphid on stick traps
    • Second spray: Dimethoate 0.03% one month after first spray
    • Third spray: Endosulfan 0.07% after 15 days of second spray if Helicoverpa infestation is high

  • Groundnut pod borer (Penthicoides seriatoporus):
    • Soil application of the granular insecticide, Cartap hydrochloride 4 g @ 10 kg/ha at 55 to 65 days after sowing is recommended for effective and economic control for pod borer Penthicoides seriatoporus familiar in groundnut crop grown under rainfed conditions of North Saurashtra agroclimatic zone

Weed management:
  • Pre emergence application of Fluchloralin @1.0 kg (a.i)/ha or pendimethalin @1.0kg (a.i)/ha or Alachlor @1.0kg a.i./ha or Metachlor @1.0 kg a.i./ha

• Some other important practices
  • Application of life saving irrigation at pegging and pod-development stages of groundnut
  • Apply borax @ 2 kg/ha as soil application at the time of sowing when soils are deficient in boron
  • Amla in dryland horticulture
• Leaf spot resistant varieties – NRCG-10121, NRCG-10123, NRCG-10125
• Deep tillage is done for reducing soil borne pest
• Pearl millet act as a barrier for thrips and leaf miner
• Castor act as barrier for Spodoptera litura, Achoea janata
• Groundnut + soybean for trapping leaf miner, thrips

**Suitable cropping systems**
• Groundnut + castor (3:1)
• Groundnut + pigeonpea (3:1)
• Groundnut + sesame (AHT-C/ Guj. Til–1)
• Perennial pigeonpea (alleys) + groundnut (GG-2)

**Farm implements/ tools**
• Seed cum fertilizer drilling attachment (Bullock drawn): Three operations i.e. fertilizer drilling, seed drilling and covering at time. Rs. 3500/-
• Seed cum fertilizer drilling attachment (Tractor drawn): Three operations i.e. fertilizer drilling, seed drilling and covering at time. Rs.13, 680/-
• Tractor mounted power sprayer: Uniform and efficient spraying to cover large area. Of 1.8 ha./hours. Rs.50,000/-
• Bullock drawn multipurpose tool bar: Sowing, interculturing, Earthing up and Harvesting. Rs.1800/-
• Groundnut thresher: Threshing of Groundnut. Rs.15000/-
• Sub soiler: For deep ploughing and moisture conservation. Rs.8000/-
• M.B.Plough: To pulverize the soil and for deep ploughing. Rs.10,000/-

**Alternate farming systems**
• **Alley cropping:** Subabul (paired row) + sorghum (5-6), subabul + groundnut, perennial pigeonpea (alleys) + groundnut (GG-2)
• **Fodder/ green biomass:** On sloppy fallow lands, grow Dicanthium annulatum, Dichrostachys cinerea, Albizzia lebbeck, Leucaena leucocephala, Pongamia pinnata
• **Fruit:** Custard apple, Mango, Pomegranate, Phalsa, Fig, Jamun, Tamarind
• **Medicinal/ Aromatic Plants:** Plantago ovata, Cassia angustifolia, Liquorice.
• **Vegetables:** Cowpea, Clusterbean, Brinjal, Okra, Long melon, Drumstick.
• **Animal component:** Female buffaloes, Cows, Male cattle, Sheep, Goat and Poultry

**Contingent planning**

**Delay in monsoon by**
• 15th July to 31st July:
  • Grow erect groundnut (GG-2, GG-5, GG-7), sesame (G-Sesame-1, G-Sesame-2), castor (GAUCH-1), hybrid pearl millet (GHB-235, GHB-316, GHB-558), greengram (K-851, GM-4), blackgram (T-9, TPU-4), pigeonpea (ICPL-87, GT-100)
• 1st August to 14th August:
  • Grow pulses blackgram (T-9, TPU-4), forage maize/ sorghum (Gundri, GFS-5), castor (GAUCH-1, GC-2) and sesame (Purva-1)

• 15th August to 31st August:
  • Grow forage maize/ sorghum (Gundri, GFS-5), sesame (Purva-1)

**Drought spell after normal sowing**

• 1-2 weeks after sowing:
  • Resowing of early duration varieties or alternate crops should be recommended as under, if sufficient rainfall is received. Hybrid pearmillet (GHB-235, GHB-316, GHB-558), sorghum (GJ-39, J-41), sesame (G-Sesame-1, G-Sesame-2), castor (GAUCH-1, GC-2), blackgram (T-9, TPU-4)

• 3-5 weeks after sowing:
  • Agricultural operations like interculturing, weeding, hoeing and mulching may be taken up, if drought spell prolongs for two weeks or more weeks. The ratooning of sorghum may be done and top dressing of fertilizer should be suggested if sufficient rainfall after 3-5 weeks dry spell

**Early withdrawal of monsoon**

• Give life saving irrigation
• Minimize moisture losses through complete removal of weeds
• Perform interculturing to conserve soil moisture
• Harvest the crop according to maturity of crop duration
• Thin the plant population

**Satisfactory late rains during September - October**

• Relay cropping of castor, sunflower, sesame (Purva-1) and fodder sorghum
• Second crops like rapeseed mustard and chickpea could be taken
• Ratooning of sorghum
KARNATAKA

In Karnataka there is one district viz. Kolar under low runoff and low yield gap region, four districts viz. Tumkur, Chitradurga, Bijapur and Dharwad under low runoff and medium yield gap region, one district viz. Mysore under medium runoff and medium yield gap region and one district viz. Belgaum under high runoff and medium yield gap region.

Agroecological setting

- **Climate**: Hot dry sub humid
- **Physiography**: North Sahyadris of Karnataka
- **Soils**: Shallow and medium loamy and clayey black soils and deep clayey black soils (Vertic Inceptisols – 70%; Vertisols – 30%)
- **Annual rainfall**: 1551 mm
- **Potential evapotranspiration**: 1482 mm
- **Moisture availability period**: 150-180 days

Soil and water conservation

- Graded bunds
- Zingg terraces
- Compartment bunding
- Broad bed and furrows for black soils
- Ridges and furrows
- Supplemental irrigation
- Suitable surface drainage measures to avoid water logging
Crop management

- **Varieties:** R-8808
- **Seed rate:** 100 kg/ha
- **Planting pattern:** 30x10 cm
- **Nutrient management**
  - 25 kg N + 50 kg P₂O₅ + 25 kg K₂O/ha
  - 50% organics + 50% inorganics
- **Pest management**
  - Root grub: Apply Thimmet or Phorate granules at 10 kg/ha to soil before sowing or treat the seed with chlorpyriphos @ 6 ml/kg seed.
  - Aphids, leaf miner: Spray 0.05% Endosulfan or Dimethoate or Monocrotophos
  - Red hairy caterpillar:
    - Arrange bonfires 2 days after soaking rain from 8.00 PM to 10.00 PM
    - Make a furrow around the field, and apply Carbaryl dust in the furrow
    - For second and third instar larvae spray dimethoate @ 2 ml/l or Monocrotophos @ 1.6 ml/l
    - Poison bait with 10 kg rice bran + 1 kg jaggery + 500 ml Quinolphos can be applied for effective control.
- **Weed management:**
  - Pre-emergence application of Nitrofen 25 EC @ 1.2 l a.i./ ha or Alcohol 50 EC @ 4.0 l a.i./ ha or Fluchloralin 45 EC a.i./ ha
  - **Some other important practices**
    - Shallow ploughing before sowing and ridging and furrowing 25 days after sowing
    - Apply borax @ 2 kg/ha as soil application at the time of sowing when soils are deficient in boron
    - Deep tillage is done for reducing soil borne pest
    - Pearlmillet acts as a barrier for thrips and leaf miner
    - Castor acts as a barrier for *Spodoptera litura, Achoea janata*
    - Groundnut + soybean for trapping leaf miner, thrips
  - **Cultural practices**
    - Soil amendment with castor cake @ 500 kg/ha (preferably 15 days before sowing) for soil borne diseases like stem rot and collar rot
    - Intercropping of groundnut with pigeonpea/ pearlmillet/ sorghum (3:1) depending upon the locally recommended intercrops against foliar fungal diseases (early and late leaf spots, rust) and insect pests (leaf miner and thrips)
    - Use of trap crops such as cowpea/ soybean (leaf miner and leaf hoppers)/ castor (*Spodoptera* and leaf hoppers) as border crops for sucking/ defoliating insects
    - One hand weeding at 30-35 days after sowing after the application of pre-emergence weedicide Fluchloralin @ 1.5 kg a.i./ha

Suitable cropping systems

- Pigeonpea + groundnut (1:3 or 1:2)
- Groundnut + cotton (2:1)
Farm implements/ tools

- Wooden plough (Bullock drawn): Shallow ploughing to a depth of 10 cm. Rs.2000/-
- MB plough (Bullock drawn): Deep ploughing. Rs.4000/-
- MB plough (Tractor drawn): Deep ploughing. Rs.15000/-
- Blade harrow (Bullock drawn): Harrowing. Rs.1000/-
- Blade harrow (Tractor drawn): For harrowing. Rs.10000/-
- Seed cum fertilizer drill (Bullock drawn): For sowing and fertilizer application. Rs.2500/-
- Seed cum fertilizer drill (Bullock drawn – adjustable): Sowing and fertilizer application simultaneously. Rs.4500/
- Seed cum fertilizer drill (Tractor drawn): For sowing and fertilizer application. Rs.26000/-
- Ridger: Ridges and furrows. Rs.1000/-
- Bund former: Compartment bund. Rs.700/-
- Slit hoe: Hoeing operation. Rs.500/-
- Blade hoe: Intercultivation operations. Rs.500/-
- Wooden float: Clod breaking. Rs.600/-
- Buck scraper: For leveling. Rs.2500/-
- Scooper: For scooping. Rs.500/-
- Multi furrow opener (Tractor drawn): For opening of furrows. Rs.15000/-
- Cultivator (Tractor drawn): For cultivating. Rs.15000/-
- Rotovator (tractor drawn): For incorporation of residues and green manures. Rs.45000/-

Alternate Farming systems

- Agave (Agave sisolana with 10,000 plants/ha) intercropped with subabul. Cutting of agave leaves once in a year for fibre extraction with retaining top ten leaves
- Silviculture: Shallow black soils: Casuarina, Dalberga sissoo, Hardwickia binata, Acacia nilotica, Prosopis cineraria, Marginal land: Dalberga sissoo, Neem, Acacia nilotica, Subabul
- Alley cropping: Subabul/ casuarina + Kharif crops
- Agro horti system: Ber (umran) + curry leaf, Ber (umran) – safflower + chickpea, Ber/ Custard apple/ Pomegrante/ Amla + kharif (spreading) crops
- Horticulture: Mango plants in levelled portion of zingg conservation terrace
- Fodder/ green biomass: Dalberga sissoo, Gliricidia, Albizia lebbeck, Hardwickia binata, Cassia siama, Azadirachta indica
- Fruit: Mango, Pomegranate, Sapota, Ber, Jamun, and Tamarind
- Medicinal and aromatic plants: Cassia angustifolia, Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium
-Vegetables: Onion, Brinjal, Chillies, Cowpea, Cucumber, Clusterbean, Drumstick, Curry leaf
- Animal Component: Male/ Female cattle, Female buffaloes, Sheep, Goat, Poultry
Contingent planning:

Normal onset of monsoon favourable for kharif crops:

- Take up sowing of the following crops in June in light soils. Groundnut (erect and spreading), pearl millet, pigeonpea, kharif sorghum, setaria, hybrid sorghum and other crop mixtures like kharif sorghum + pigeonpea (2:1), groundnut + pigeonpea (4:2), setaria + pigeonpea (2:1) and pearl millet + pigeonpea (2:1). Similarly, pulse crops in light and retentive soils may be taken up.

- In rabi areas, i.e., medium deep black soils, sow greengram, blackgram, cucumber as a first crop to be followed by rabi sorghum/ sunflower/ chickpea/ safflower/ wheat.

- When the land is kept fallow (deep black soils) for rabi crops, have compartment bunds having 1% slope, scooping where the land slope is 1 to 2%, ridges and furrows or tied ridges for better soil and moisture conservation. Take up harrowings after each rain, which helps in controlling weeds and conserving soil moisture.

- Sow sunhemp as green manuring crop in medium to deep black soils prior to rabi crops.

Normal onset of monsoon but dry spells soon after germination:

- Give protective irrigation for the crops sown wherever possible.

- Ratoon pearl millet, sorghum for rejuvenation after rains.

- For crops like groundnut, take up urea spray (2% solution) immediately after rains for quick revival.

- When the sown crops completely wither, plant setaria, dolichos, horsegram, matki, cowpea and sunflower soon after revival of rains.

No normal rains in June but onset of rains in July:

- Sow groundnut (bunch), hybrid pearl millet, sunflower and setaria in kharif areas.

- Sow pure pigeonpea/ cowpea/ horsegram in light soils.

- In rabi areas don’t sow greengram since it will delay rabi sowing.

- Have repeated harrowings to remove weeds in rabi areas.

Normal rains in July/ August:

- Complete sowing dryland cotton before middle of August. Grow Herbaceum cottons in place of Hirsutams. Early sowing of cotton is advantageous.

- Sunflower, pigeonpea, and setaria should be sown in light soils and pigeonpea in medium to deep black soils.

- In light textured soils in Hadagali, Koppal, Muddebihal, Raibag, and Athani castor may be sown. Plant castor on contour bunds also. In medium to deep black soils also take up castor sowing.

- Relay cotton in groundnut in medium black soils.

Normal rains in September:

- Complete sowing of rabi sorghum by middle of September in medium black soils of northern taluks of Bijapur district. In the remaining taluks viz., Bagalkot, Hungund, and Mudhol, complete rabi sorghum sowing by first week of October. Early sowing of rabi sorghum in other districts is preferred. Maximum yields of rabi sorghum are obtained by sowing in September only.

- Sow sunflower before 10th September.

- Sow safflower as a sole crop before the end of September. Early sowing is more beneficial.
Districtwise Promising Technologies for Rainfed Groundnut based Production System in India

- Complete sowing of Bhagya/ Laxmi cotton before 15th September.
- If normal rains are not received during September take up dry seeding of sunflower, rabi sorghum, chickpea with 1 times the normal seed rate relatively at depth without applying chemical fertilizer. Fertilizer may be applied at appropriate growth stage having optimum moisture condition.

**Sowing in October:**
- Continue sowing of rabi sorghum and sesame upto October 15th with 50% recommended level of fertilizer
- Follow mixed cropping of rabi sorghum + chickpea in 2:1 row proportion
- Sow rabi sorghum and chickpea as mixed crops (random mixing)
- Increase the area under safflower
- Sow chickpea and safflower in 4:2 or 3:1 row proportions for higher returns
- Top dress rabi sorghum with 10-15 kg N/ha if adequate moisture is available in the soil

**Early stoppage of rains towards the end of season:**
- Thin out the population of rabi sorghum by blading every third row or alternate row within 40 days of sowing.
- In mixed crops of rabi sorghum and safflower, uproot rabi sorghum component.
- Close soil cracks by repeated interculturing.
- Provide supplemental irrigation through farm ponds or other sources. By providing one or two supplemental irrigation(s) to rabi sorghum, safflower and chickpea, yields could be increased by 50 to 60%
- Use surface mulches of mixed trash or farm waste wherever possible. Where farm waste is not available, use a blade to form a thin layer of soil mulch to avoid cracks.

**Agroecological setting**

**Bijapur**
- **Climate:** Hot arid
- **Physiography:** North Karnataka plateau
- **Soils:** Deep loamy and clayey mixed red and black soils (Vertisols–50%; Vertic Inceptisols–50%)
- **Annual rainfall:** 573 mm
- **Potential evapotranspiration:** 1649 mm
- **Moisture availability period:** 60-120 days

**Chitradurga**
- **Climate:** Hot moist semi arid
- **Physiography:** Central Karnataka plateau
- **Soils:** Medium to deep red loamy soils (Alfisols–85%; Vertisols–15%)
- **Annual rainfall:** 654 mm
• **Potential evapotranspiration**: 1606 mm  
• **Moisture availability period**: 120-150 days

**Dharwad**

• **Climate**: Hot dry sub humid  
• **Physiography**: Western Karnataka plateau  
• **Soils**: Shallow and medium loamy and clayey black soils, deep clayey black soils (Vertic Inceptisols–70%; Vertisols–30%)  
• **Annual rainfall**: 813 mm  
• **Potential evapotranspiration**: 1665 mm  
• **Moisture availability period**: 150-180 days

**Tumkur**

• **Climate**: Hot moist semi arid  
• **Physiography**: Central Karnataka plateau  
• **Soils**: Medium to deep red loamy soils (Alfisols–100%)  
• **Annual rainfall**: 654 mm  
• **Potential evapotranspiration**: 1606 mm  
• **Moisture availability period**: 120-150 days

**Soil and water conservation:**

**Bijapur**

• Rubbles at 0.3 m vertical interval on contour key lines  
• Compartement bunding, ridges and furrows, contour cultivation  
• Planting Khus grass and subabul in paired rows at vertical interval of 0.3 m.  
• A farm pond of 150 m³ capacity for every one hectare catchment area to harvest excess runoff in medium to deep black soils  
• *In situ* moisture conservation practices like compartment bunding, ridges and furrows contour cultivation and fall ploughing helped to conserve more moisture in deep black soils

**Chitradurga, Tumkur**

• Construction of contour bunds with a cross section of 0.54 m² to control and conserve runoff.  
• Graded border strips with a gradient of 0.1 to 0.5% to fit into the local topography and hydrographic features.  
• Broad based bunds of 1.5 m² cross section on contour with 1 m vertical interval for better rainwater conservation.  

**In situ conservation practices:**

• Summer ploughing to a depth of 15-30 cm for better infiltration of rainwater during onset of rains.  
• Crop cultivation across the slope with Vetiver/ Pennisetum grass as live barrier at 0.5 m vertical interval to check the velocity of runoff and better moisture conservation and availability for a longer period for fingermillet/ groundnut/ maize/ sunflower crops.
• Plastered both sides and bottom with cement + sandy clay soils (1:8)
• Conservation furrow at 3 to 6 mm interval
• Opening furrows on 0.2 to 0.4 slope
• Summer tillage

**Dharwad**

• Rubbles at 0.3 m vertical interval on contour key lines
• Compartment bunding, ridges and furrows, contour cultivation
• Planting Khus grass and subabul in paired rows at vertical interval of 0.3 m
• Bund stabilization through *Stylosanthes* Spp
• A farm pond of 150 m³ capacity for every one hectare catchment area to harvest excess runoff in medium to deep black soils

**Crop management**

**Bijapur, Dharwad**

• **Varieties:** R-8808
• **Seed rate:** 100 kg/ha
• **Planting pattern:** 30x10 cm

**Nutrient management**

• 25 kg N + 50 kg P₂O₅ + 25 kg K₂O/ha.
• 50% organics + 50% in organics

**Pest management**

• Root grub: Apply Thimmet or Phorate granules at 10 kg/ha to soil before sowing or treat the seed with chlorpyriphos @ 6 ml/kg seed.
• Aphids, leaf miner: Spray 0.05% Endosulfan or Dimethoate or Monocrotophos
• Red hairy caterpillar:
  • Arrange bonfires 2 days after soaking rain from 8.00 PM to 10.00 PM
  • Make a furrow around the field, and apply Carbaryl dust in the furrow
  • For second and third instar larvae spray Dimethoate @ 2 ml/l or Monocrotophos @ 1.6 ml/l
  • Poison bait with 10 kg rice bran + 1 kg jaggery + 500 ml Quinolphos can be applied for effective control.

**Weed management**

**Bijapur, Dharwad**

• Pre-emergence application of Nitrofen 25 EC @ 1.2 l a.i./ ha or Alcohol 50 EC @ 4.0 l a.i./ ha or Fluchloratin 45 EC a.i./ ha

• **Some other important practices:**
  • Drought tolerant varieties – Girnar–1
  • Deep tillage is done for reducing soil borne pest

**Chitradurga, Tumkur**

• **Varieties:** JL-24, K-134, and VRI-2
• **Seed rate**: 100 kg/ha
• **Planting pattern**: 30x10 cm
• **Integrated nutrient management**
  • 25 kg N + 50 kg P₂O₅ + 25 kg K₂O + 7.5 t farm yard manure/ ha.
  • Apply all nutrients as basal
  • Apply 1.0 t/ha lime and also 10 Kg/ha sulphur into the soil
• **Integrated pest management**
  • For weed control: Alachlor 50 EC or 2.5 l, Pendimethalin 30 EC or 3.25 l, Fluchloralin 45 EC or 2.0 l, Metolachlor 50 EC 2.1 l in 750 l water, to be sprayed within 3 days after sowing.

**Weed management**

**Chitradurga, Tumkur**

• Pre-emergence application of Alachlor 50 EC @ 2.5 l/ kg a.i./ ha (spray volume 750 l of water/ ha) or Pendimethalin 30 EC @ 3.25 l/ kg a.i./ ha or Fluchloralin 45 EC @ 2.0 l/ kg a.i./ ha or Metolachlor 50 EC @ 2.0 l/ kg a.i./ ha is to be sprayed within 3 days after sowing
• Pre-emergence application of Alachlor 50 EC @ 2.5 l/ kg a.i./ ha (spray volume 750 l of water/ ha) is to be sprayed after 3 days after sowing

**Some other important practices**:

• Dry sowing of groundnut when monsoon is delayed
• Apply borax @ 2 kg/ha as soil application at the time of sowing in boron deficient soils

**Suitable cropping systems**

**Bijapur, Dharwad**

• Pigeonpea + groundnut (1:3 or 1:2)
• Groundnut + cotton (2:1)

**Chitradurga, Tumkur**

• Pigeonpea paired rows – groundnut (2:10)
• Groundnut – castor (8:1)

**Farm implements/ tools:**

**Bijapur, Dharwad**

• Wooden plough (Bullock drawn): Shallow ploughing to a depth of 10 cm. Rs.2000/-
• MB plough (Bullock drawn): Deep ploughing. Rs.4000/-
• MB plough (Tractor drawn): Deep ploughing. Rs.15000/-
• Blade harrow (Bullock drawn): Harrowing. Rs.1000/-
• Blade harrow (Tractor drawn): For harrowing. Rs.10000/-
• Seed cum fertilizer drill (Bullock drawn): For sowing and fertilizer application. Rs.2500/-
• Seed cum fertilizer drill (Bullock drawn – adjustable): Sowing and fertilizer application simultaneously. Rs.4500/
• Seed cum fertilizer drill (Tractor drawn): For sowing and fertilizer application. Rs.26000/-
• Ridger: Ridges and furrows. Rs.1000/-
• Bund former: Compartment bund. Rs.700/-
• Slit hoe: Hoeing operation. Rs.500/-
• Blade hoe: Intercultivation operations. Rs.500/-
• Wooden float: Clod breaking. Rs.600/-
• Buck scraper: For leveling. Rs.2500/-
• Scooper: For scooping. Rs.500/-
• Multi furrow opener (Tractor drawn): For opening of furrows. Rs.15000/-
• Cultivator (Tractor drawn): For cultivating. Rs.15000/-
• Rotovator (tractor drawn): For incorporation of residues and green manures. Rs.45000/-

Chitradurga, Tumkur

• Bullock drawn seed-cum-fertilizer drill (fingermillet): Bullock drawn manual operation for fingermillet seeding and fertilizer application (hand metered) (Rs.1500/- per unit)
• Bullock drawn seed-cum-fertilizer drill (groundnut): Groundnut seeding with fertilizer application (Rs.1500/- per unit)
• Multifurrow opener: Opening furrows for hand seeding of different crops (Rs.1300/- per unit)
• Bent tyne hoe: Intercultural operation for fingermillet (Rs.350/- per unit)
• Duck foot hoe: Intercultural operation for fingermillet and groundnut for moisture conservation (Hand metered) (Rs.350/- per unit)
• Crust braker: For breaking the crust to facilitate smooth emergence of the seedling in fingermillet and groundnut (Rs.500/- per unit)

Alternate Farming systems
Bijapur, Dharwad

• Agave (Agave sisolana) with 10,000 plants/ha) intercropped with subabul. Cutting of agave leaves once in a year for fibre extraction with retaining top ten leaves
• Silviculture
• Shallow black soils: Casuarina, Dalbergia sissoo, Hardwickia binata, Acacia nilotica, Prosopis cineraria
• Marginal land: Dalbergia sissoo, Neem, Acacia nilotica, Subabul
• Alley cropping: Subabul/ casuarina + kharif crops
• Agro horti system: Ber (Umran) + curry leaf, ber (Umran) – safflower + chickpea, ber/ custard apple/ pomegranate/ amla + kharif (spreading) crops
• Horticulture: Mango plants in levelled portion of zingg conservation terrace
• Fodder/green biomass: Dalbergia sissoo, Gliricidia, Albizzia lebbeck, Hardwickia binata, Cassia siamea, Azadirachta indica
• Fruit: Mango, pomegranate, sapota, ber, jamun, tamarind
• Medicinal & Aromatic Plants: Cassia angustifolia, Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium
• Vegetables: Onion, brinjal, chillies, cowpea, cucumber, cluster bean, drumstick.
• Animal component: Female and male cattle, female buffaloes, goat, sheep, poultry
Chitradurga, Tumkur

- **Fodder/green biomass:** *Casuarina, Silveroak, Gliricidia, Calliandra, Faidherbia albida* on bunds Gravelly shallow soils – *Stylosanthes scabra*
- High gradient non-arable lands with shallow soils – Amla in catch pits with deep soils – neem, pongamia, and *Albizia lebbeck*
- Forage crops – *Pennisetum, Pedicallatum/ Cenchrus ciliaris, Microtaliem axillaris*
- Wastelands – Jackfruit, Custard apple, Tamarind
- **Fruit:** Mango, Pomegranate, Sapota, Guava, Custard apple, Jamun
- **Medicinal and aromatic plants:** *Catharanthus roseus, Cassia angustifolia, Salanum viarum, Dioscorea, Geranium, Pogostemon patchouli, Jasmine*
- **Vegetables:** Tomato, Chillies, Okra, Watermelon, Bitter gourd, Drumstick, Brinjal.
- **Animal Component:** Male/ female cattle, Female buffaloes, Poultry, Sheep, Goat,
- **Other enterprises:** Muhsroom cultivation, sericulture, piggery, apiary, rabbit rearing

Contingent planning

Bijapur, Dharwad

**Normal onset of monsoon favourable for kharif crops:**

- Take up sowing of the following crops in June in light soils. Groundnut (erect and spreading), pearlmillet, pigeonpea, *kharif* sorghum, setaria, hybrid sorghum and other crop mixtures like *kharif* sorghum + pigeonpea (2:1), groundnut + pigeonpea (4:2), setaria + pigeonpea (2:1) and pearlmillet + pigeonpea (2:1). Similarly, pulse crops in light and retentive soils may be taken up.
- In *rabi* areas, i.e., medium deep black soils, sow greengram, blackgram, cucumber as a first crop to be followed by *rabi* sorghum/ sunflower/ chickpea/ safflower/ wheat.
- When the land is kept fallow (deep black soils) for *rabi* crops, have compartment bunds having 1% slope, scooping where the land slope is 1 to 2%, ridges and furrows or tied ridges for better soil and moisture conservation. Take up harrowings after each rain which helps in controlling weeds and conserving soil moisture.
- Sow sunhemp as green manuring crop in medium to deep black soils prior to *rabi* crops.

**Normal onset of monsoon but dry spells soon after germination**

- Give protective irrigation for the crops sown wherever possible.
- Ratoon pearlmillet, sorghum for refuvenation after rains.
- For crops like groundnut, take up urea spray (2% solution) immediately after rains for quick revival.
- When the sown crops completely wither, plant setaria, dolichos, horsegram, matki, cowpea and sunflower soon after revival of rains.

**No normal rains in June but onset of rains in July**

- Sow groundnut (munch), hybrid pearlmillet, sunflower and setaria in *kharif* areas.
- Sow pure pigeonpea/ cowpea/ horsegram in light soils.
- In *rabi* areas don’t sow greengram since it will delay *rabi* sowing.
- Have repeated harrowings to remove weeds in *rabi* areas.
Normal rains in July/ August:
- Complete sowing dryland cotton before the middle of August. Grow Herbaceum cottons in place of Hirsutams. Early sowing of cotton is advantageous.
- Sunflower, pigeonpea, and setaria should be sown in light soils and pigeonpea in medium to deep black soils.
- In light textured soils in Hadagali, Koppal, Muddebihal, Raibag, and Athani castor may be sown. Plant castor on contour bunds also. In medium to deep black soils also take up castor sowing.
- Relay cotton in groundnut in medium black soils.

Normal rains in September
- Complete sowing of rabi sorghum by middle of September in medium black soils of northern taluks of Bijapur district. In the remaining taluks viz., Bagalkot, Hungund, and Mudhol, complete rabi sorghum sowing by first week of October. Early sowing of rabi sorghum in other districts is preferred. Maximum yields of rabi sorghum are obtained by sowing in September only.
- Sow sunflower before 10th September.
- Sow safflower as a sole crop before the end of September. Early sowing is more beneficial.
- Complete sowing of Bhagya/ Laxmi cotton before 15th September.
- If normal rains are not received during September take up dry seeding of sunflower, Rabi sorghum, Chickpea with 1½ times the normal seed rate relatively at depth without applying chemical fertilizers. Fertilizers may be applied at appropriate growth stage having optimum moisture condition.

Sowing in October
- Continue the sowing rabi sorghum sesame October 15th with 50% recommended level of fertilizer
- Follow mixed cropping of rabi sorghum + chickpea in 2:1 row proportion
- Sow rabi sorghum and chickpea as mixed crops (random mixing)
- Increase the area under safflower
- Sow chickpea and safflower in 4:2 or 3:1 row proportions for higher returns
- Top dress rabi sorghum with 10-15 kg N/ha if adequate moisture is available in the soil

Early stoppage of rains towards the end of season
- Thin out the population of rabi sorghum by blading every third row or alternate row within 40 days of sowing
- In mixed crops of rabi sorghum and safflower, uproot rabi sorghum component.
- Close soil cracks by repeated interculturating
- Provide supplemental irrigation through farm ponds or other sources. By providing one or two supplemental irrigation(s) to rabi sorghum, safflower and chickpea, yields could be increased by 50 to 60 percent
- Use surface mulches of mixed trash or farm waste wherever possible-Where farm waste is not available, use a blade to form a thin layer of soil mulch to avoid cracks

Chitradurga, Tumkur
- Second fortnight of April
  - Double cropping: Sesame or greengram
\textbf{All India Coordinated Research Project for Dryland Agriculture (AICRPDA)}

- **First fortnight of May**
  - Monocropping: Pigeonpea
  - Sequence cropping: Sesame, cowpea, greengram, blackgram, fodder maize, fodder pearlmillet, fodder sorghum.

- **Second fortnight of May**
  - Monocropping: Pigeonpea
  - Sequence cropping: Sesame, cowpea, greengram, blackgram, fodder maize, fodder pearlmillet, fodder sorghum.

- **First fortnight of June**
  - Monocropping: Long duration fingermillet, pigeonpea, maize, groundnut
  - Sequence cropping: Fodder maize, fodder sorghum, fodder pearlmillet, cowpea

- **Second fortnight of June**
  - Monocropping: Long duration fingermillet, pigeonpea, maize and groundnut
  - Sequence cropping: Sowing of chilli nursery

- **First fortnight of July**
  - Monocropping: Groundnut, long duration fingermillet
  - Sequence cropping: Sowing of chilli nursery

- **Second fortnight of July**
  - Monocropping: Groundnut, long/ medium duration fingermillet
  - Sequence cropping: Sowing of chilli nursery

- **First fortnight of August**
  - Monocropping: Cowpea, horsegram, short duration fingermillet, transplanting chilli
  - Sequence cropping: Cowpea, horsegram, short duration fingermillet, transplanting chilli. Sowing of chilli nursery and short duration fingermillet.

- **Second fortnight of August**
  - Monocropping: Short duration fingermillet, transplanting of medium and long duration fingermillet.
  - Transplanting chilli, cowpea, horsegram
  - Sequence cropping: Short duration fingermillet, transplanting of medium and long duration fingermillet, transplanting chilli, cowpea, horsegram. Also, fodder crops (maize-pearlmillet, sorghum)

- **First fortnight of September**
  - Monocropping: Horsegram, transplanting of short duration fingermillet and chilli (with protective irrigation)
  - Sequence cropping: Horsegram, transplanting of short duration fingermillet and chilli (with protective irrigation)

- Summer tillage

**Crop management**
- **Varieties:** JL-24, K-134, and VRI-2
- **Seed rate:** 100 kg/ha
- **Planting pattern:** 30x10 cm
- **Nutrient management**
  - 25 kg N + 50 kg P₂O₅ + 25 kg K₂O + 7.5 t farm yard manure/ha.
  - Apply all nutrients as basal
  - Apply 1.0 t/ha lime and also 10 kg/ha sulphur into the soil
- **Pest management**
  - For weed control: Alachlor 50 EC 2.5 l, Pendimethalin 30 EC or 3.25 l, Fluchloralin 45 EC or 2.0 l or Metolachlor 50 EC 2.0 l, 750 l water to be sprayed within 3 days after sowing.

**Weed management:**
- Pre-emergence application of Alachlor 50 EC @ 2.5 l/ kg a.i./ ha (spray volume 750 l of water/ ha) or Pendimethalin 30 EC @ 3.25 l/ kg a.i./ ha or Fluchloralin 45 EC @ 2.0 l/ kg a.i./ ha or Metolachlor 50 EC @ 2.0 l/ kg a.i./ ha is to be sprayed within 3 days after sowing
- Pre-emergence application of Alachlor 50 EC @ 2.5 l/ kg a.i./ ha (spray volume 750 l of water/ ha) is to be sprayed after 3 days after sowing
- Some other important practices
- Dry sowing of groundnut when monsoon is delayed
- Apply borax @ 2 kg/ha as soil application at the time of sowing in boron deficient soils
**Suitable cropping systems**

- Pigeonpea paired rows – groundnut (2:10)
- Groundnut – castor (8:1)

**Farm implements/ tools**

- Bullock drawn seed-cum-fertilizer drill (finger millet): Bullock drawn manual operation for finger millet seeding and fertilizer application (hand metered) (Rs.1500/- per unit)
- Bullock drawn seed-cum-fertilizer drill (groundnut): Groundnut seeding with fertilizer application (Rs.1500/- per unit)
- Multifurrow opener: Opening furrows for hand seeding of different crops (Rs.1300/- per unit)
- Bent tyne hoe: Intercultural operation for finger millet (Rs.350/- per unit)
- Duck foot hoe: Intercultural operation for finger millet and groundnut for moisture conservation (Hand metered) (Rs.350/- per unit)
- Crust braker: For breaking the crust to facilitate smooth emergence of the seedling in finger millet and groundnut (Rs.500/- per unit)

**Alternate farming systems**

- Fodder/ green biomass: *Cassuarina*, Silver oak, *Gliricidia*, *Calliandra*, *Faidherbia albida* on bunds Gravelly shallow soils – *Stylosanthes scabra*
- High gradient non-arable lands with shallow soils – Amla in catche pits with deep soils – neem, pongamia, and *Albizia lebbeck*
- Forage crops – *Pennisetum, pedicallatum / Cenchrus ciliaris, Microtaliem axillaris*
- Wastelands – Jackfruit, Custard apple, Tamarind
- Fruit: Mango, Pomegranate, Sapota, Guava, Custard apple, Jamun
- Medicinal and aromatic plants: *Catharanthus roseus, Cassia angustifolia, Solanum viarum, Dioscorea, Geranium, Pogostemon patchouli, Jasmine*
- Vegetables: Tomato, Chillies, Okra, Watermelon, Bitter gourd, Drumstick, Brinjal
- Animal Component: Male/ female cattle, Buffaloes, Poultry, Sheep, Goat
- Other enterprises: Muhsroom cultivation, Sericulture, Piggery, Apiary, Rabbit rearing

**Contingent crop planning**

- **Second fortnight of April**
  - Double cropping: Sesame or greengram

- **First fortnight of May**
  - Monocropping: Pigeonpea
  - Sequence cropping: Sesame, cowpea, greengram, blackgram, fodder maize, fodder pearlmillet, fodder sorghum

- **Second fortnight of May**
  - Monocropping: Pigeonpea
  - Sequence cropping: Sesame, cowpea, greengram, blackgram, fodder maize, fodder pearlmillet, fodder sorghum
• First fortnight of June
  • Monocropping: Long duration finger millet, pigeonpea, maize, groundnut
  • Sequence cropping: Fodder maize, fodder sorghum, fodder pearlmillet, cowpea

• Second fortnight of June
  • Monocropping: Long duration finger millet, pigeonpea, maize and groundnut
  • Sequence cropping: Sowing of chilli nursery

• First fortnight of July
  Monocropping: Groundnut, long duration finger millet
  Sequence cropping: Sowing of chilli nursery

• Second fortnight of July
  • Monocropping: Groundnut, long/medium duration finger millet
  • Sequence cropping: Sowing of chilli nursery

• First fortnight of August
  • Monocropping: Cowpea, horsegram, short duration finger millet, transplanting chilli
  • Sequence cropping: Cowpea, horsegram, short duration finger millet, transplanting chilli. Sowing of chilli nursery and short duration finger millet.

• Second fortnight of August
  • Monocropping: Short duration finger millet, transplanting of medium and long duration finger millet. Transplanting chilli, cowpea, horsegram
  • Sequence cropping: Short duration finger millet, transplanting of medium and long duration finger millet, transplanting chilli, cowpea, horsegram, also fodder crops (maize-pearlmillet, sorghum)

• First fortnight of September
  • Monocropping: Horsegram, transplanting of short duration finger millet and chilli (with protective irrigation)
  • Sequence cropping: Horsegram, transplanting of short duration finger millet and chilli (with protective irrigation)

<table>
<thead>
<tr>
<th>District</th>
<th>Region</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mysore</td>
<td>Medium run off and Medium yield gap</td>
</tr>
</tbody>
</table>

Agroecological setting
• Climate: Hot moist semi arid
• Physiography: Central South Karnataka
• Soils: Medium to deep red loamy soils (Alfisols – 100%)
• Annual rainfall: 920 mm
• Potential evapotranspiration: 1535 mm
• Moisture availability period: 120-150 days

Soil and water conservation:
Longterm conservation practices:
• Construction of contour bunds with a cross section of 0.54 m² to control and conserve runoff.
• Construction of graded bunds by providing 0.2 to 0.4% grade with a cross section of 0.36 m² for safe disposal of excess runoff.

• Graded border strips with a gradient of 0.1 to 0.5% to fit into the local topography and hydrographic features.

• Broad based bunds of 1.5 m² cross sections on contour with 1 m vertical interval for better rainwater conservation.

• Reduced contour bunds (0.36 m²) in combination with vegetative live barriers for effective conservation of rainwater in low rainfall areas (< 600 mm)

**Insitu conservation practices:**

• Opening a dead furrow in between the paired rows in pigeonpea and maize for better moisture conservation.

• Graded ridge and furrows are made on 0.2 to 0.4% grade for better conservation of moisture as well as safe disposal for cultivation of maize.

• Fall ploughing to a depth of 15-30 cm for better infiltration of rainwater during onset of rains.

• Deep ploughing to a depth of 25-30 cm using mould board plough to reduce the weed incidence and increase soil moisture storage for sunflower and maize crops.

• Crop cultivation across the slope with vetiver/ pennisetum grass as live barrier at 0.5 m vertical interval to check the velocity of runoff and better moisture conservation and availability for a longer period for fingermillet/ groundnut/ maize/ sunflower crops.

  • More emphasis on *insitu* water conservation
  • Reducing soil crusting problem
  • Dead furrows at 3.6 m interval
  • Farm pond size of 250 m³ plastered both sides and bottom with cement + sandy clay soils (1:8)
  • Opening furrows on 0.2 to 0.4 slope
  • Summer tillage

**Crop management**

• **Varieties:** JL-24, K-134, and VRI-2

• **Seed rate:** 100 kg/ha

• **Planting pattern:** 30x10 cm

• **Nutrient management**

  • 25 kg N + 50 kg P₂O₅ + 25 kg K₂O + 7.5 t farm yard manure/ha.
  • Apply all nutrients as basal
  • Apply 1.0 t/ha lime and also 10 kg/ha sulphur into the soil

• **Pest management**

  • For weed control: Alachlor 50 EC 2.5 l, Pendimethalin 30 EC or 3.25 l, Fluchloralin 45 EC or 2.0 l or Metolachlor 50 EC 2.0 l, 750 l water, to be sprayed within 3 days after sowing.

**Weed management:**

• Pre-emergence application of Alachlor 50 EC @ 2.5 l/ kg a.i./ ha (spray volume 750 l of water/ ha) or Pendimethalin 30 EC @ 3.25 l/ kg a.i./ ha or Fluchloralin 45 EC @ 2.0 l/ kg a.i./ ha or Metolachlor 50 EC @ 2.0 l/ kg a.i./ ha is to be sprayed within 3 days after sowing
• Pre-emergence application of Alachlor 50 EC @ 2.5 l/kg a.i./ha (spray volume 750 l of water/ha) is to be sprayed after 3 days after sowing

• Some other important practices
• Dry sowing of groundnut when monsoon is delayed
• Apply borax @ 2 kg/ha as soil application at the time of sowing in boron deficient soils

Suitable cropping systems
• Pigeonpea paired rows – Groundnut (2:10)
• Groundnut-castor (8:1)

Farm implements/ tools
• Bullock drawn seed-cum-fertilizer drill (fingermillet): Bullock drawn manual operation for fingermillet seeding and fertilizer application (hand metered) (Rs.1500/- per unit)
• Bullock drawn seed-cum-fertilizer drill (groundnut): Groundnut seeding with fertilizer application (Rs.1500/- per unit)
• Multifurrow opener: Opening furrows for hand seeding of different crops (Rs.1300/- per unit)
• Bent tyne hoe: Intercultural operation for fingermillet (Rs.350/- per unit)
• Duck foot hoe: Intercultural operation for fingermillet and groundnut for moisture conservation (Hand metered) (Rs.350/- per unit)
• Crust braker: For breaking the crust to facilitate smooth emergence of the seedling in fingermillet and groundnut (Rs.500/- per unit)

Alternate farming systems
• Fodder/ green biomass: Casuarina, Silver oak, Gliricidia, Calliandra, Faidherbia albida on bund Gravelly shallow soils – Stylosanthes scabra; High gradient non-arable lands with shallow soils – Amla In catch pits with deep soils – neem, pongamia, Albizia lebbeck
• Forage crops – Pennisetum pedicallatum/ Cenchrus ciliaris, Microtaliem axillaris
• Wastelands – Jackfruit, Custard apple, Tamarind
• Fruit: Mango, Pomegranate, Sapota, Guava, Custard apple, Jamun
• Medicinal and aromatic plants: Catharanthus roseus, Cassia angustifolia, Salanum viarum, Dioscorea, Geranium, Pogostemon patchouli, Jasmine
• Vegetables: Tomato, Chillies, Okra, Watermelon, Bitter gourd, Drumstick, Brinjal.
• Animal Component: Male/ female cattle, Male buffaloes, Poultry, Sheep, Goat,
• Other enterprises: Muhsroom cultivation, Sericulture, Piggery, Apiary, Rabbit rearing

Contingent planning
• Second fortnight of April
  • Double cropping: Sesame or greengram

First fortnight of May
• Monocropping: Pigeonpea
• Sequence cropping: Sesame, cowpea, greengram, blackgram, fodder maize, fodder pearl millet, fodder sorghum.
• Second fortnight of May
  • Monocropping: Pigeonpea
  • Sequence cropping: Sesame, cowpea, greengram, blackgram, fodder maize, fodder pearlmillet, fodder sorghum.

• First fortnight of June
  • Monocropping: Long duration finger millet, pigeonpea, maize, groundnut
  • Sequence cropping: Fodder maize, fodder sorghum, fodder pearlmillet, cowpea

• Second fortnight of June
  • Monocropping: Long duration finger millet, pigeonpea, maize and groundnut
  • Sequence cropping: Sowing of chilli nursery

• First fortnight of July
  • Monocropping: Groundnut, long duration finger millet
  • Sequence cropping: Sowing of chilli nursery

• Second fortnight of July
  • Monocropping: Groundnut, long/medium duration finger millet
  • Sequence cropping: Sowing of chilli nursery

• First fortnight of August
  • Monocropping: Cowpea, horsegram, short duration finger millet, transplanting chilli
  • Sequence cropping: Cowpea, horsegram, short duration finger millet, transplanting chilli. Sowing of chilli nursery and short duration finger millet.

• Second fortnight of August
  • Monocropping: Short duration finger millet, transplanting of medium and long duration finger millet. Transplanting chilli, cowpea, horsegram
  • Sequence cropping: Short duration finger millet, transplanting of medium and long duration finger millet, transplanting chilli, cowpea, horsegram. Also, fodder crops (maize-pearlmillet, sorghum)

• First fortnight of September
  • Monocropping: Horsegram, transplanting of short duration finger millet and chilli (with protective irrigation)
  • Sequence cropping: Horsegram, transplanting of short duration finger millet and chilli (with protective irrigation)
MADHYA PRADESH

In Madhya Pradesh there are two districts viz. Khargone and Shivapuri under medium runoff and low yield gap region.

<table>
<thead>
<tr>
<th>District</th>
<th>Region</th>
</tr>
</thead>
<tbody>
<tr>
<td>Khargone</td>
<td>Medium runoff and</td>
</tr>
<tr>
<td></td>
<td>Low yield gap</td>
</tr>
<tr>
<td>Shivpuri</td>
<td></td>
</tr>
</tbody>
</table>

Agroecological setting

Khargone

- **Climate**: Hot moist semi-arid
- **Physiography**: Western Malwa Plateau
- **Soils**: Deep clayey black soils and shallow black soils, medium and deep clayey black soils, shallow loamy black soils (Vertic Inceptisols-80%)
- **Annual rainfall**: 888 mm
- **Potential evapotranspiration**: 1792 mm
- **Moisture availability period**: 120-180 days

Shivpuri

- **Climate**: Hot moist semi-arid
- **Physiography**: Madhya Bharat Plateau
- **Soils**: Deep loamy and clayey mixed red and black soils (Vertic Inceptisols–100%)
- **Annual rainfall**: 1179 mm
- **Potential evapotranspiration**: 1498 mm
- **Moisture availability period**: 120-150 days
Soil and water conservation

Khargone

- Straighten the gullied portion in the farmers' fields through earth moving machinery to reduce the length of gully allowing safe passage for the run off water. It brings additional area under cultivation through reclamation process.
- Construct percolation tank for increasing ground water recharge and enhancing ground water storage to provide extra irrigation to the crops.
- Use gabion as an inlet and outlet of water harvesting tank without any structural failure to trap silt on the upstream sit to increase life of water storage bodies.
- Construct water harvesting tank to retain the excess run off from the water shed area to use stored water for irrigation purpose.
- Silpaulin (a plastic material) of 90 – 120 gsm has been found effective lining material for farm ponds used for water harvesting purposes.
- Use vegetative barriers to strengthen the mechanical bunds at suitable vertical intervals in order to reduce run off in associated soil losses from the cultivated fields.
- Develop a sort of terracing break the continuity of undulating slope to reduce the chances of degrading cultivated fields into gullied one.
- Ensure drainage line treatment for providing safe disposal of excess run off and providing more opportunity time in order to reduce erosive velocity.
- Mould board plough, used for deep tillage to increase the productivity of kharif crops and enhance sowing of rabi crops through better moisture conservation and eradication of infested weeds.
- Graded bunds alone and/or along with vegetative barriers at vertical intervals of 50 cm are most effective in controlling soil erosion and nutrient losses on soils having slope up to 2 per cent.
- Off-season shallow tillage is important not only in controlling weeds but also in helping entry of rain water.
- Provide insitu soil mulch by operating bullock drawn dora to fill up the cracks, to conserve soil moisture and to achieve weed control. Straw mulch @ 4-5 t/ha in between the rows of crop plants to minimize evaporative losses, moisture conservation and to increase moisture efficiency in rabi crops.

Shivpuri

- Compartment bunding after seeding emergence
- Contour farming
- Graded border strips
- Sowing across the slope and ridging later
- To mitigate early season drought, one extra inter cultivation along with straw mulch @ 5 t/ha is effective
- One protective irrigation is only solution to control late season drought effect during summer

Crop management

Khargone

- Varieties: JL-24, JGN-3
- Seed rate: 100 kg/ha
- Planting pattern: 30x15 cm
• **Nutrient management**
  - 25 kg N + 40 kg P$_2$O$_5$/ha
  - 30 kg N+ 60 kg P$_2$O$_5$ + 20 kg K$_2$O + 30 kg S/ha
  - Integrated nutrient management (50% organic + 50% inorganic). Crop planning according to land suitability

• **Pest management**: For sucking pests, Phosphomidon or Dimethoate spray

• Some other important practices
  - Leaf spot resistant varieties - NRCG-10121, NRCG-10123, NRCG-10125
  - Deep tillage is done for reducing soil borne pest
  - Pearlmillet acts as a barrier for thrips and leaf miner
  - Castor acts as a barrier for *Spodoptera litura, Achoea janata*
  - Groundnut + soybean for trapping leaf miner, thrips
  - Seed treatment: Carbendazim (Bavistin) 2 g/kg of seeds for seed borne fungi viz., collar rot and stem rot.

• **Cultural practices**
  - Soil amendment with castor cake @ 500 kg/ha (preferably 15 days before sowing) for soil borne diseases like stem rot and collar rot.
  - Intercropping of groundnut with pigeonpea/ pearlmillet/ sorghum (3:1) depending upon the locally recommended intercrops against foliar fungal diseases (early and late leaf spots, rust) and insect pests (leaf miner and thrips)
  - Use of trap crops such as cowpea/ soybean (leaf miner and leaf hoppers)/ castor (Spodoptera and leaf hoppers) as border crops for sucking/ defoliating insects.

**Shivpuri**

• **Varieties**: JL-24

• **Seed rate**: 100 kg/ha

• **Planting pattern**: 30x15 cm

• **Nutrient management**: 25 kg N + 40 kg/ha
  - 30 kg N+ 60 kg P$_2$O$_5$ + 20 kg K + 30 kg S/ha

• **Pest management**: For sucking pests phosphamidon or dimethoate spray

**Suitable cropping systems**

**Khargone, Shivpuri**

• Groundnut + soybean

• Groundnut + maize (3:1)

**Farm implements/ tools**

**Khargone**

• Suitable implements for seedbed preparations:
  - Meston Plough
  - Iron Bakhar
- Suitable implements for sowing operations
  - Mahakal Dufan
  - Mahakal Tifan and
  - Sarta attachment for intercropping
- Suitable implements/ tools for intercultural operations
  - Hand dora (small blade harrow)
  - Bullock drawn dora (small blade harrow with wooden beam)
  - Indore ridger

**Shivpuri**
- Fertilizer cum Seed drill

**Alternate farming systems**

**Khargone**
- **Fodder/green biomass**: Dichrostachys cineria, Albizia amara, Faidherbia albida, Hardwickia binata, Cassia, Leucaena leucocephala and Albizia lebbeck.
- **Fruit**: Ber, Pomegranate, Mango, Fig, Tamarind
- **Medicinal and aromatic plants**: Withamnia somnifera, Rauvolfia serpentina, Vetiver zizanoides, Palma rosa.
- **Vegetables**: Chillies, Okra, Watermelon, Cowpea, Clusterbean, Amaranthus, Round melon.
- **Animal Component**: Male/ female cattle, Female buffaloes, Sheep, Goat

**Shivpuri**
- **Agro – hortisystem**: Mango + Pea/ Berseem (green fodder)/ wheat/ chickpea/ soybean
- **Silvi – pastoral system**: Teak + Sudan grass
- **Fodder/ green biomass**: Leucaena, Melia azadirach, Dichrostachys cineraria, Albizia amara, A.lebbeck, Hardwickia binata, A.nilotica
- **Ley farming – Four years continuous raising of Stylosanthes hamata** followed by sorghum
- **Fruit**: Emblica officinalis (amla), Guava, Ber, Mango
- **Medicinal and aromatic plants**: Rauvolfia serpentina, Vetiver zizanoides, Palma rosa, Safed musli, Aswagandha
- **Vegetables**: Bottle gourd, Brinjal, Tomato, Chillies, Cowpea, Okra
- **Alternate crops in place of Greengram, blackgram/ soybean/ sunflower in place of kakun, kodan and filkar (small millets)**
- **Animal component**: Female Cattle, Male Cattle, Female Buffaloes, Goat and Poultry

**Contingent planning**

**Khargone**
If monsoon is delayed or there is a failure of timely sown crops due to intermittent droughts, then for delayed sowing improved crops and their varieties may be chosen for planting, as given below:

**15th to 31st July**
Districtwise Promising Technologies for Rainfed Groundnut based Production System in India

- Maize – (short duration varieties like Navjot, Sathi)
- Pigeonpea – (under deep soils, preferred varieties are ICPL 151, T-21, Kh-2, ICPL 87, ICPL 88039)
- Sunflower – Morden, Surya, Manjira
- Sesame – Bhadeli, TKG 22, TKG 37
- Cowpea – Pusa Komal and Pusa Baisakhi
- Castor – GCH4, Kranthi

1st to 15th August
- Fodder crops – *Sorghum sudanensis*, maize- African tall, Dinanath grass and pearl millet
- Sunflower – Morden, Surya, Manjira and any of the hybrids

15th to 31st August
- Sesame – Bhadeli, TKG 22, TKG 37.
- Cowa Komal and Pusa Baisakhi
- Rajgira – (Amaranthus) – Co-1, Co-2
- Castor – GCH4, Kranthi
- Fodder corps – *Sorghum sudanensis*, Maize- African tall, Dinanath grass and pearl millet
- Safflower – JSF-1, JSF- 7 (spineless), JSF-73, Sharda
- Sunflower – Morden, Surya and Manjira
- Sesame – Bhadeli, TKG 22, and RT-46
- Rajgira –Co-1 and Co-2
- Fodder crops – Barley, Oats, Maize – African tall

Shivpuri

*Kharif*
- Under normal rainfall
- Pearl millet (ProAgro 9402), pigeonpea (UPAS 120), greengram (K 851), cluster bean (RGC 197)
- Rainfall upto end of July
  - Cereals and pulses: Pearlmillet (Proagro 9402) intercropped with pigeonpea (UPAS 120, IPCL 87) blackgram (T-9) and greengram (K 851). Pure crop of cluster bean, blackgram and greengram.
  - Oilseeds: Groundnut (Chandra) and sesame (Pratap) upto the end of third week of July
- Rainfall upto third week of August
  - Cereals and pulses: Cluster bean (RGC 197) and transplanting of pearlmillet (MBH 163)
- Rainfall upto end of August
  - Cluster bean as pure crop (RGC 197)
  - Castor with a seed rate of 15 kg/ha.

*Rabi :*
- Rapeseed mustard (Pusa Jaikisan), barley (Ratna), chickpea (K 850), lentil (L 9-12), and rapeseed mustard (TMH 1) and safflower in the order.
MAHARASHTRA

In Maharashtra there are five districts viz. Sangli, Dhule, Nasik, Jalgaon and Amaravati under low runoff and medium yield gap region and two districts viz. Kolhapur and Pune under medium runoff and low yield gap region.

<table>
<thead>
<tr>
<th>District</th>

</tbody>
</table>

**Agroecological setting**

**Amaravati**

- **Climate**: Hot moist semi arid
- **Physiography**: Eastern Maharashtra Plateau
- **Soils**: Medium and deep clayey black soils, shallow loamy to clayey black soils (Vertic Inceptisols–85%; Vertisols–15%)
- **Annual rainfall**: 976 mm
- **Potential evapotranspiration**: 1770 mm
- **Moisture availability period**: 120-150 days

**Dhule**

- **Climate**: Hot semi arid
- **Physiography**: Western Maharashtra plateau
- **Soils**: Shallow and medium loamy, medium and deep clayey black soils (Vertic Inceptisols–65%; Vertisols–35%)
• **Annual rainfall:** 738 mm
• **Potential evapotranspiration:** 1713 mm
• **Moisture availability period:** 120-150 days

**Jalgaon**
• **Climate:** Hot moist semi arid
• **Physiography:** Eastern Maharashtra Plateau check
• **Soils:** Shallow and medium loamy, medium and deep clayey black soils, shallow loamy to clayey black soils (Vertic Inceptisols–65%; Vertisols–35%)
• **Annual rainfall:** 841 mm
• **Potential evapotranspiration:** 1912 mm
• **Moisture availability period:** 120-150 days

**Nasik**
• **Climate:** Hot semi arid
• **Physiography:** South Western Maharashtra
• **Soils:** Shallow and Medium loamy, medium and deep clayey black soils (Vertic Inceptisols–85%; Vertisols–15%)
• **Annual rainfall:** 591 mm
• **Potential evapotranspiration:** 1659 mm
• **Moisture availability period:** 120-150 days

**Sangli**
• **Climate:** Hot semi arid/ Hot dry sub humid
• **Physiography:** South Western Maharashtra
• **Soils:** Shallow and Medium loamy, medium and deep clayey black soils, Shallow and medium loamy and clayey black soils, deep clayey black soils. (Vertic Inceptisols–75%; Vertisols–25%)
• **Annual rainfall:** 571 mm
• **Potential evapotranspiration:** 1620 mm
• **Moisture availability period:** 90-180 days

**Soil and water conservation**

**Amaravati, Jalgaon**
• Compartment bunding
• Ridges and furrows
• Graded bunds on clayey soil to drain off excess water
• *In situ* conservation measures like tillage, mulching, conservation furrows, ridging
• Contour farming

**Nasik**
• Compartment bunding
• Graded bunds on clayey soil to drain off excess water.
**All India Coordinated Research Project for Dryland Agriculture (AICRPDA)**

- *Insitu* conservation measures like tillage, mulching, conservation furrows, ridging
- Contour farming

**Dhule**
- Compartment bunding
- Ridges and furrows prior to sowing
- Marvel-8 grass on bunds for protection of bunds
- Contour live bunds of Marvel-8 or Leucaena
- *Leucaena* lopping mulch at 3.5 t/ha

**Sangli**
- Compartment bunding
- Contour bunds
- *Insitu* conservation measures like conservation furrows, mulching and deep tillage.
- Indigenous water harvesting structures

**Crop management**

**Amaravati**
- **Varieties:** JL-24, JL-220
- **Seed rate:** 100 kg/ha
- **Planting pattern:** 30x10/15 cm
- **Pest management**
  - White grub: Only in case of late sowing, soil application of phorate 10 G granules @ 10 kg/ha.
  - Pre and post emergence mortality: Treat seeds with Thiram @ 1.5 g + 1.5 g Carbendazim/ kg seed
- Some other important practices
  - Deep tillage is done for reducing soil borne pest
  - Pearlmillet act as a barrier for thrips and leaf miner
  - Castor act as barrier for *Spodoptera litura, Achoea janata*
  - Groundnut + soybean for trapping leaf miner, thrips

**Dhule, Nasik, Sangli, Jalgaon**
- **Varieties:** ICGS-11, JL-220, TAG-24, and TG-26
- **Seed rate:** 100 kg/ha
- **Planting pattern:**
  - Erect: 30x10 cm
  - Semi spreading: 30x15 cm
  - Spreading: 45x15 cm
- **Nutrient management:** 12.5 kg N + 25 kg P₂O₅/ha
- Apply well developed FYM or compost @ 10-15 t/ha along with 10-30 kg N/ha as a starter dose.
• **Pest management**
  - White grub:
    - Hand collection of white grub adults from white grub affected fields immediately after onset of summer rains.
    - Seed treatment with Chlorpyriphos @ 2 ml/kg of seed.
    - Soil application of 5% Heptachlor @ 80 Kg/ha before sowing
  - Leaf roller:
    - Spraying of Monocrotophos 0.05% as soon as incidence starts
    - Dusting of 10% Carbaryl dust @ 20 kg/ha
    - Keep weed free *kharif* crops by one hoeing and weeding up to 30 days from sowing

**Weed management:**
- Dhule, Nasik, Sangli, Jalgaon
  - Hand weeding up to 30 days after sowing with weeding hook
  - Two hoeing and up to 40 days after sowing with hoe
- **Some other important practices**
  - Deep tillage is done for reducing soil borne pest
  - Pearl millet acts as a barrier for thrips and leaf miner
  - Castor acts as a barrier for Spodoptera litura, Achoea janata
  - Groundnut + soybean for trapping leaf miner, thrips
  - Apply borax @ 2 kg/ha as soil application at the time of sowing in boron deficient soils

**Suitable cropping systems**

**Amaravati, Jalgaon**
- Pigeonpea + groundnut (1:2 or 1:3)

**Farm implements/ tools**

**Amaravati**
- Manually operated fertilizer drill: Simple two row tool for top dressing (hand metered)
- Bullock drawn serrated blade for interculture: Two rows, improved blades for intercultivation

**Dhule, Nasik, Sangli, Jalgaon**
- Tractor multicrop planter: Sowing of *rabi* sorghum was done on farmer’s field. Minor modifications made in the original design for adoption of the machine in dryland region. Awareness was created amongst the farmers by conducting demonstrations on farmer’s field. The farmers were satisfied with operation of this machine. (Rs.22800/-)
- Bullock drawn Jyoti Planter: The field trials were conducted and the machine is recommended for sowing the crops of dryland region. (Rs.7500/-)
- Weeders developed by Maharashtra Agro Industries Development Corporation Ltd. (MAIDC): These weeders were tested on farmer’s field and identified for weeding and interculturing in row crops. (Rs.410/-)
- Tractor drawn single bottom reversible plough: Tested on farmers’ field for ploughing and identified for ploughing operations in dryland region, as the field operation was effective and economical. (Rs.18500/-)
• Tractor drawn double bottom reversible plough: Tested on farmers’ field for ploughing and identified for ploughing operations in dryland region as the field operation was effective and economical. (Rs.23600/-)

• Bund formers were tested and found suitable for compartment bund (Rs.1050/-)

• Baliram plough: Identified for moisture conservation practices like ridges and furrows and compartment bund (Rs.2500/-)

• Kopergaon bullock drawn two bowl seed drill: The local made seed drill named “Kopergaon seed drill” is operated on the field for sowing crops like sorghum, pearl millet, pigeon pea etc. and identified for sowing of the crops of dryland region (Rs.9000/-)

Alternate farming systems

Amaravati, Jalgaon

• **Fodder/ Green biomass:** Leucaena Leucocephala, Albizzia lebbeck, Dalbergia sissoo, A. indica, A. procera, *Gilricidium*

• **Fruit:** Pomegranate, Ber, Mango, Sapota, Guava, Tamarind

• **Medicinal and aromatic plants:** *Solanum viarum, Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Ocimum viride*

• **Vegetables:** Onion, Chilli, Brinjal, Okra, Amaranthus, Bottle gourd.

• **Animal Component:** Male/ Female cattle, Female buffaloes, Sheep, Goat, Poultry

Dhule, Nasik

• **Silvipasture:** Leucaena + Marvel-8

• **Alley cropping:** Ber (20 m alleys) + pearl millet + pigeon pea for shallow soils

• **Fodder:** Maize (African Tall), Oats (Kent), *Stylo hamata*

• **Fodder/ Green biomass:** *Dalbergia sissoo, Albizzia lebbeck, Anogeissus latfolia, Sesbania, Stylo Marvel–8 grass*

• **Fruit:** Ber, Custard apple, Pomegranate, Amla + *kharif* spreading crops

• **Medicinal and aromatic plants:** *Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium*

• **Vegetables:** Onion, Tomato, Okra, Cow pea, Cluster bean, Drumstick

• **Animal Component:**
  • Cow breeds: Gir, Jersey
  • Poultry: White Leghorn
  • Rams
  • Male/ Female cattle, Female buffaloes, Sheep, Goat

Alternate land use system:

Dhule, Nasik, Sangli

• Lands < 22.5 cm depth of soil should be cultivated with Agroforestry and dryland horticulture including Ber, Custard apple, Amla, Wood apple, Jambhul etc.

• On light soils Ber cultivation at 20x5 m spatial arrangement associated with pearl millet + pigeon pea (2:1) intercropping within two rows of Ber plantation was recommended.

• Silvipastoral system of Subabul + Marvel-8 with cutting of alternate trees at 7th year onwards for fuel is also recommended.
Contingent planning

Amaravati, Jalgaon

Regular Monsoon

- The regular monsoon starts by 24th meteorological week. For regular monsoon, the following recommendations stand.

  - Light soils (depth 20 to 30-35 cm)
    - Graded bunding of lands
    - Growing of strips of erosion resistant crops (Greengram Kopergaon/ blackgram T-9) in the upper half of the plot and sorghum (CSH-9) in the lower half of the plot.

  - Medium deep soils (35-40 cm to 75 cm depth)
    - Cotton (AKH 84635) with greengram (Kopergaon) as an intercrop in 1:1 row ratio.
    - Sorghum (CSH-9) with intercrop of greengram/ blackgram in 1:1 row ratio.
    - Groundnut intercropped with sunflower in the row ratio of 6:2 (Groundnut: JL-24, Sunflower-Morden)

  - Deep soils (75 cm depth)
    - Alternate crops like *hirsutum* cotton, Sorghum (CSH-9/ CSH-5) intercropped with Pigeonpea (C-11) in 6:2 row ratio

Delayed onset of monsoon by 15 days

- If the rains start by end of June, the sowing may start in the first week of July. The following changes should be made in the cropping plans.
  - Area under cotton be reduced and replaced by sorghum.
  - Sowing of sorghum should be completed before 10th July. Sorghum CSH-1 variety is sown instead of CSH-5/ CSH-9.
  - Area under greengram/ blackgram should be replaced by early pigeonpea varieties such as ICPL 8863 or ICPL 87119
  - Area under groundnut be reduced and replaced by sunflower (EC 68414)

Regular monsoon followed by long gaps

- Wherever possible, life-saving irrigation be given.
- Cotton can sustain some stress, but sorghum, groundnut, chickpea are not able to sustain such stress. Therefore, use of some conditioner such as spray of urea, not exceeding to 2 % concentration, may be useful.
- If there is a total failure of crop, sowing of photo-insensitive crops such as pearlimillet (BJ-104) or sunflower (EC-68414) may be attempted.
- In deep soils, the land may be tilled properly. In case, *kharif* crop fails, to follow *rabi* safflower (N.7), pigeonpea (C.11) in September.

Extended monsoon

- Advantage of this situation is exploited for double cropping with safflower and chickpea. Safflower (No.7) may be sown after sorghum till 15th October. Beyond 15th October chickpea may be sown.

Dhule, Nasik, Sangli

Mid season correction during *kharif* with soil having a depth upto 45 cm for the scarcity zone.

- Second fortnight of June: All *kharif* crops
- First fortnight of July:
- Pearl millet, setaria, groundnut, castor, pigeonpea, horsegram
- Intercropping of Pearl millet + pigeonpea (2:1)
- Cluster bean + pigeonpea (2:1)
- Cluster bean + castor (2:1)
- Sunflower + pigeonpea (2:1)

- **Second fortnight of July:**
  - Sunflower, pigeonpea, horsegram, setaria
  - Castor, pearl millet (ergot resistant)
  - Intercropping of sunflower + pigeonpea (2:1)

- **First fortnight of August:**
  - Sunflower, pigeonpea, castor, horsegram
  - Sunflower + pigeonpea (2:1)

- **Second fortnight of August:**
  - Sunflower, pigeonpea, castor
  - Sunflower + pigeonpea (2:1)

- **First fortnight of September:**
  - Sorghum for fodder

- **Second fortnight of September:**
  - *Rabi* Sorghum, safflower, sunflower

- **First fortnight of October:**
  - *Rabi* Sorghum, safflower, chickpea, sunflower

- **Second fortnight of October:**
  - Chickpea, sunflower, *rabi* sorghum

- **First fortnight of November:**
  - Chickpea, sunflower

**Agroecological setting**

**Kolhapur**

- **Climate:** Hot dry sub humid/ Hot moist sub humid to humid (transitional)
- **Physiography:** North Sahyadris
- **Soils:** Shallow and medium loamy and clayey black soils, deep clayey black soils, deep loamy to clayey red and lateritic soils (Vertisols-50%; Vertic Inceptisols-50%)
- **Annual rainfall:** 1137 mm
- **Potential evapotranspiration:** 1636 mm
- **Length of growing period (LGP)/ (Moisture availability period):** 150-270 days
Pune

- **Climate**: Hot dry sub humid
- **Physiography**: North Sahyadris
- **Soils**: Shallow and medium loamy, medium and deep clayey black soils, medium to deep loamy to clayey mixed red and black soils (Vertic Inceptisols–65%; Vertisols – 35%)
- **Annual rainfall**: 715 mm
- **Potential evapotranspiration**: 1476 mm
- **Moisture availability period**: 90-240 days

Satara

- **Climate**: Hot semi arid/ Hot dry sub humid
- **Physiography**: North Sahyadris, Maharashtra state
- **Soils**: Shallow and medium loamy, medium and deep clayey black soils, shallow and medium loamy and clayey black soils, deep clayey black soils (Udupts/ Udalfs – 60%; Vertisols – 40%)
- **Annual rainfall**: 1119 mm
- **Potential evapotranspiration**: 1618 mm
- **Moisture availability period**: 90-180 days

Soil and water conservation

Kolhapur, Pune & Satara

- Conservation furrows
- Compartment bunding
- Broad bed furrows
- Gabion structures in waterways
- More emphasis could be given on permanent structures in Kolhapur
- Semi permanent and *insitu* conservation measures may be encouraged in Pune district

Crop management

Kolhapur, Pune & Satara

- **Varieties**: ICGS-11, JL-220, TAG-24, and TG-26
- **Seed rate**: 100 kg/ha
- **Planting Pattern**:
  - Erect : 30x10 cm
  - Semi spreading : 30x15 cm
  - Spreading : 45x15 cm
- **Nutrient management**: 12.5 kg N + 25 kg P₂O₅/ha
- **Pest management**
  - White grub:
    - Hand collection of white grub adults from white grub affected fields immediately after onset of summer rains.
• Seed treatment with Chlorpyriphos @ 2 ml/kg of seed.
• Soil application of 5% Heptachlor @ 80 kg/ha before sowing
• Leaf roller:
  • Spraying of Monocrotophos 0.05% as soon as incidence starts
  • Dusting of 10% Carbaryl dust @ 20 kg/ha
  • Keep weed free *kharif* crops by one hoeing and weeding up to 30 days from sowing

**Weed management:**
**Kolhapur, Pune, Satara**
• Hand weeding upto 30 days after sowing with weeding hook
• Two hoeing and upto 40 days after sowing with hoe

**Some other important practices**
• Deep tillage is done for reducing soil borne pest
• Pearlmillet act as a barrier for thrips and leaf miner
• Castor act as barrier for *Spodoptera litura, Achoea janata*
• Groundnut + soybean for trapping leaf miner, thrips

**Farm implements/ tools**
**Kolhapur, Pune & Satara**
• Tractor multicrop planter: Sowing of *rabi* sorghum was done on farmer’s field. Minor modifications made in the original design for adoption of the machine in dryland region. Awareness was created amongst the farmers by conducting demonstrations on farmer’s field. The farmers were satisfied with operation of this machine. Rs.22800/-

• Bullock drawn Jyoti Planter: The field trials were conducted and the machine is recommended for sowing the crops of dryland region. Rs.7500/-

• Weeders developed by Maharashtra Agro Industries Development Corporation Ltd. (MAIDC): These weeders were tested on farmer’s field and identified for weeding and interculturing in row crops. Rs.410/-

• Tractor drawn single bottom reversible plough: Tested on farmers’ field for ploughing and identified for ploughing operations in dryland region as the field operation was effective and economical. Rs.18500/-

• Tractor drawn double bottom reversible plough: Tested on farmers’ field for ploughing and identified for ploughing operations in dryland region as the field operation was effective and economical. Rs.23600/-

• Bund former: Bund formers were tested and found suitable for compartment bund Rs.1050/-

• Baliram plough: Identified for moisture conervation practices like ridges and furrows and compartment bunding Rs.2500/-

• Kopergaon bullock drawn two bowl seed drill: The local made seed drill named “Kopergaon seed drill” is operated on the field for sowing crops like sorghum, pearlmillet, pigeonpea etc. and identified for sowing of the crops of dryland region Rs.9000/-

**Alternate farming systems**
**Kolhapur and Satara**
• **Silvipasture:** Leucana + Marvel–8
• **Alley cropping:** Ber (20 m alleys) + pearlmillet + pigeonpea for shallow soils

• **Fodder:** Maize (African Tall) Oats (Kent), *Stylosanthes hamata*

• **Fodder/ Green biomass:** *Dalbergia sissoo, Albizia lebbeck, Anogeissus latifolia, Sesbania, Stylo, Marvel–8 grass*

• **Fruit:** Ber, Custard apple, Pomegranate, Amla + *kharif* spreading crops

• **Medicinal/ Aromatic Plants:** *Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium*

• **Vegetables:** Onion, Tomato, Okra, Cowpea, Cluster bean, Drumstick

• **Animal Component:**
  - Cow breeds: Gir, Jersey
  - Poultry: White Leghorn
  - Rams
  - Male/ female cattle, Female buffaloes, Sheep, Goat

**Pune**

• **Agri-Horticultural system** - Ber (5x5 m) + mothbean (8 lines) (30x10 cm)

• **Silvipasture:** Leucaena + Marvel–8

• **Alley cropping:** Ber (20 m alleys) + pearlmillet + pigeonpea for shallow soils

• **Fodder:** Maize (African Tall) Oats (Kent), *Stylosanthes hamata*

• **Fodder/ Green biomass:** *Alianthus excelsa, Albizia lebbeck, Dalbergia sissoo, Neem, Prosopis cineraria*

• **Fruit:** Ber, Date palm, Jamun, Fig, Phalsa, Karonola

• **Medicinal / Aromatic plants:** *Plantago ovata, Cassia angustifolia, Safed musli, Papaver somniferum*

• **Vegetables:** Clusterbean, Cowpea, Amaranthus, Round melon

• **Animal Component:** Female buffalo/ Sheep, Goat

**Alternate land use system**

**Kolhapur, Pune & Satara**

• Lands < 22.5 cm depth of soil should be cultivated with Agroforestry and dryland horticulture including Ber, Custard apple, Amla, Wood apple, Jambhul etc.

• On light soils Ber cultivation at 20x5 m spatial arrangement associated with pearlmillet + pigeonpea (2:1) intercropping within two rows of Ber plantation was recommended.

• Silvipastoral system of Subabul + Marvel-8 with cutting of the alternate trees at 7th year onwards for fuel is also recommended.

• For productivity increment in scarcity area the pearlmillet + pigeonpea (2:1) intercropping or ber (5x5 m) + mothbean (8 lines) is advocated.

**Contingent planning**

**Kolhapur, Pune & Satara**

Mid season corrections during *kharif* with soil having depth upto 45 cm for the scarcity zone.
• **Second Fortnight of June:**
  - All *kharif* crops

• **First fortnight of July:**
  - Pearlmillet, setaria, groundnut, castor, pigeonpea, horsegram
  - Intercropping of pearlmillet + pigeonpea (2:1)
  - Cluster bean + pigeonpea (2:1)
  - Cluster bean + castor (2:1)
  - Sunflower + pigeonpea (2:1)

• **Second fortnight of July:**
  - Sunflower, pigeonpea, horsegram, setaria
  - Castor, pearlmillet (ergot resistant)
  - Intercropping of sunflower + pigeonpea (2:1)

• **First fortnight of August:**
  - Sunflower, pigeonpea, castor, horsegram
  - Sunflower + pigeonpea (2:1)

• **Second fortnight of August:**
  - Sunflower, pigeonpea, castor
  - Sunflower + pigeonpea (2:1)

• **First fortnight of September:**
  - Sorghum for fodder

• **Second fortnight of September:**
  - *Rabi* Sorghum, Safflower, Sunflower

• **First fortnight of October:**
  - *Rabi* Sorghum, Safflower, Chickpea, Sunflower

• **Second fortnight of October:**
  - Chickpea, Sunflower, *rabi* sorghum.

• **First fortnight of November:**
  - Chickpea, Sunflower
ORISSA

In Orissa there is one districts viz. Ganjam under high runoff and medium yield gap region and one district viz. Sambalpur under high runoff and high yield gap region.

<table>
<thead>
<tr>
<th>District</th>
<th>Region</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ganjam</td>
<td>High runoff and Medium yield gap</td>
</tr>
</tbody>
</table>

**Agroecological setting**

- **Climate**: Hot (moist / dry) sub humid
- **Physiography**: Eastern ghats
- **Soils**: Medium to deep loamy red and lateritic, deep loamy to clayey coastal and deltaic alluvium - derived soils (Aridisols–40%; Alfisols–60%)
- **Annual rainfall**: 1311 mm
- **Potential evapotranspiration**: 1662 mm
- **Moisture availability period**: 180-210 days

**Soil and water conservation**

- Ridges and furrows
- Emphasis on permanent soil and water conservation measures
- Water harvesting structures, ponds etc. need to be created for storage of runoff for supplemental utilization and missing a second crop successful
- *In situ* conservation measurers in uplands and midlands.
- Suitable drainage measures for low lands.
Crop management

• Varieties: JL-24, TAG-26, ICGS-11, and Smruthi

• Seed rate: 100 kg/ha

• Spreading: 80-100 kg/ha

• Erect and semi erect: 125 kg/ha, Gap filling at 7-10 days after sowing

• Planting Pattern: 30x10/15 cm, erect and semi erect type: 30x10 cm

• Spreading: 30x15 cm

• Nutrient management
  • 20 kg N + 40 kg P₂O₅ + 20 kg K₂O kg/ha + gypsum 250-500 kg/ha
  • All nutrients to be applied as basal.
  • Lime should be applied basing on the pH value for correction of soil acidity

• Pest management:
  • Weed management
    • First hoeing and weeding at 2-3 weeks after sowing/15–21 days after sowing
    • Earthing up for erect and semi erect types
    • Second weeding in spreading types 30 days after sowing is necessary

Weed management:

• Pre-planting application of herbicides viz., Fluchloralin @ 1.0 kg (a.i.)/ ha or Metolachlor @ 0.75 kg (a.i.)/ ha or Pendimethalin @ 1.0 kg (a.i.)/ ha or Oxadiazon @ 1.0 kg (a.i.)/ ha or Thioencarb @ 1.0 kg (a.i.)/ ha or Butachlor @ 1.0 kg (a.i.)/ ha in moist soil at 1 day before sowing by mixing with 1000 l/ha of water. Light hoeing should be given for incorporation of herbicide in the soil to avoid loss through volatilization and photo decomposition

• Some other important practices
  • Depth of sowing–5 cm
    • Use seed drill and seed rate for erect type in kharif
    • Application of gypsum in sulphur and calcium deficient soils @ 250 kg/ha close to the base of the plants at 20-25 days after sowing on either side and incorporated in the soil so that it remains in top 3 cm of soil

Suitable cropping systems

• Groundnut + maize (3:1 or 2:1)

• Alternate crops
  • Mesta–AMV–1, AS–7
  • Pearl millet – BPC-39, IP-417
  • Soybean – JS–1, Punjab–1
  • Turmeric – Sudarshan
  • Ginger – Nadia

Farm implements/tools:

• Bishu mould board plough for preparatory tillage
• Gujarat state fertilizer corporation seed drill for seeding in finger millet
• Implement factory seed – cum fertilizer drill for line sowing of upland rice
• Mould board plough: Suitable for primary tillage (1st and 2nd ploughing). Requires a Pair of bullock and covers 0.3 ha/ day. Rs.252/-
• Heavy soil plough: Suitable for black cotton soil. Requires a Pair of bullock and covers 0.24 ha/ day. Rs.324/-
• Cast iron plough: Suitable for ploughing and puddling in fields free from roots of trees and pebbles. Requires a pair of bullock and covers 1.0 ha/ day. Rs.266/-
• Zig-zag puddler: Puddling. Requires a pair of bullock and covers 1.0 ha/ day. Rs.1788/-
• IADP Pudder: Pulverizing light sandy loamy soil, puddling, suitable for heavy soils of western Orissa. Requires a Pair of bullock and covers 1.0 ha/ day. Rs.1700/-
• Pudder 99: Pulverising all soils, Puddling. Requires a pair of bullock and covers a 1.0 ha/ day. Rs.1232/-
• One row seed drill: Seed sowing in rice, maize and groundnut. Requires a pair of bullock and covers 0.3 ha/ day. Rs.246/-
• Two row multicrop seed drill: Seed sowing in rice, wheat, groundnut and bengalgram. Requires one man and covers 0.5 ha/ day. Rs.1164/-
• Two row mustard seed drill: Mustard sowing. Requires one man and covers 0.5 ha/ day. Rs.827/-
• Three row multicrop seed drill: Seed sowing in rice, wheat, bengalgram and groundnut. Requires one man and covers 0.8 ha/ day. Rs.1570/-
• Paddy transplanter (Manual): Transplanting paddy with proper spacing. Requires two men and covers 0.20 ha/ day. Rs.4000/-
• Pedal paddy thresher: Threshing of paddy. Requires two men and covers 2.5 q/ day. Rs.2754/-
• Power paddy thresher: Threshing of paddy. Requires Electric motor (1 HP) and covers 10-12 q/ day. Rs.8778/- (With motor and starter)
• Groundnut digger: Digging groundnut. Requires pair of bullock and covers 0.3 ha/ day. Rs.548/-
• Pedal groundnut thresher: Separating groundnut pods from the plants. Requires two men and completes 2.2 q pods/ day. Rs.2818/-
• Groundnut decorticator: Spreading seeds from groundnut pods. Requires One men and completes 50 kg/ hour. Rs.764/-
• Maize sheller: Spreading seeds from maize cobs. Requires one man and completes 1.0 q/day Rs. 25/

Alternate farming systems

• Agro-horti system: Sweet potato + maize/ castor (spacing 80x25 cm)  
  • Yam (100x60 cm) + maize/ castor  
  • Tapioca (100x100 cm) + maize/ castor  
  • Colocassia (80x25 cm) + maize/ castor

• Alley cropping: Subabul (4 m interval) + groundnut/ sesame/ cowpea (grain)

• Fodder/ Green biomass: Dalbergia sissoo, Albizia lebbeck, Anogeissus latifolia, Sesbania, Stylo, Marvel – 8 grass

• Fruit: Ber, Custard apple, Pomegranate, Amla + kharif spreading crops.

• Medicinal and aromatic plants: Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium

• Vegetables: Onion, Tomato, Okra, Cowpea, Cluster bean, Drumstick

• Non-arable wastelands
  • Tree farming (Sal, Teak)
• Silvipastoral (Shisham/ Subabul/ Gambar + Stylo/ Cenchrus/ Mixture)

• Arable wastelands
  • Agri-horticulture: Fruit crops (mango/ citrus/ sapota/ pomegranate/ custard apple/ amla/ litchi/ jackfruit/ phalsa) + field crops (pulses/ oilseeds). Hybrid mango varieties viz. Pusa Amrapalli and Pusa Mallika are becoming increasingly popular in the zone.
  • Alley cropping: Leucaena + turmeric/ ginger

Contingent planning

Normal season:
• Rice:
  • Very early group (less than 95 days): Heera, Rudra, ZHU 11-26, Vandana
  • Early group (95 to 115 days): Pathara, Kandagiri, Udayagiri, Ghanteswari and Parijat
  • Early medium (115 to 120 days): Sarathi and Bhoi
  • Medium duration (125 to 145 days): Lalat, IR-64, Konark, Gajapati, Surendra, Jajati, Swarna, MTU-1001 and Padmini
  • Late duration: Utkalaprava, Gayatri, Savitri, Prachi, Ramachani, Mahanadi and Indrabati
• Fingermillet: Dibyasinha, Nilachala, Bhairabi and Subhra
• Maize: Navjot, Vijaya, DHM-103 and Ganga-5
• Greengram: PDM-54, K-851, Dhauli and TARM-2
• Blackgram: Pant U-30, T-9 and Sarala
• Pigeonpea: UPAS-120, R-60, T-21 and S-5
• Cowpea: SEB-2, SGL-1 and Arka Kamal
• Horsegram: Urmi and Local
• Groundnut: Smruti (OG 52-1), JL-24, ICGS-11 and AK 12-24
• Castor: Aruna, DCH-177 and DCH-30
• Rapeseed mustard: PT-303, M-27, Parvati and Anuradha
• Sesame: Vinayak, Uma, Usha and Prachi
• Niger: Deomali (GA-10), IGP-76 and Phulbani Local
• Linseed: Kiran, Laxmi-27, Pusa-3 and Padmini
• Sunflower: Morden
• Cotton: MCU-5, NHH-44, Somanath, Savita and Bunny
• Ginger: Vardhan, China and Nadia
• Turmeric: Sudarsan, Suguna, Subarna and Rajendra Horti-5.
• Yam: Hatikhoja, Srikirti and Srirupa

Aberrant weather: Upland

Early season drought/Delay in onset of monsoon:

When upland rice is completely damaged, the crop may be cut down for supplying straw to the cattle. Non-paddy crops viz. fingermillet (Subhra, Bhairabi, Dibyasingha and Godavari), greengram (K 851, PDM-11 and PDM-54), blackgram (T-9, Sarala and Pant U-30), cowpea (SEB-2, SGL-1, Arka Kamal), horsegram
(Urmii), ricebean (RBL 6), sesame (Usha, Uma), castor (Aruna, DCS-9), niger (IGP-76 and Deomali) or sunflower (Morden) should be taken. Drought tolerant varieties of crop(s)/cropping system(s) should be taken up. The crop/variety should be selected based on available effective growing season.

**Mid-season drought:**

Weeding and hoeing should be done in all the crops except groundnut in flowering stage. Weeds in groundnut should be cut or uprooted not to interfere in pegging and pod formation. Hoeing creates soil mulch and decreases moisture loss from the soil. Uprooted weeds should be used as mulch between crop rows.

- Foliar spraying of 2% urea in upland rice and finger millet gives good results. For this, 200 g of urea is mixed with 10 l of water and sprayed on the foliage of the crop. Plant protection chemicals may be mixed with urea solution to minimize the cost of spraying. In a single spray 10 kg/ha of urea is applied through 500 l solution.
- Excess plants in the crop row should be thinned to reduce moisture loss from the soil.
- Use of tender twigs of *Leucaena, Gliricidia sepium, Cassia siamea* and *Mimosa invisa* and plants of sunhemp as mulch-cum-manure reduces evaporation loss from the soil.
- Spraying of planofix 10 ppm at 45 days after sowing and 20 ppm at flowering in cotton to prevent fruit drop.

**Late season drought:**

- Harvested rain water should be recycled as life saving irrigation.

**Medium and low land:**

**Direct sown rice:**

- Re-sowing of rice is needed if plant population is less than 50%. Line sowing of pre-germinated seeds of rice (125 days duration) should be done. Nursery for comparatively shorter duration rice varieties may be done.
- If plant population is more than 50% and ‘beushaning’ is not possible, weeds are uprooted by manual means. Even distribution of plants (*Khelua*) should be taken up immediately by using local tools. tillers with roots may be detached from hills with profuse tillering for planting in gappy areas. Urea solution (2%) may be sprayed to improve crop growth.

**Transplanted rice:**

- If puddling and transplanting is not possible, seedlings should not be uprooted. Weeds are removed to keep the nursery beds clean. Adequate plant protection measures are taken to protect the seedlings from disease and pest attack.
- When rainfall occurs, puddling is done by tractor drawn power tiller or rotovator for better puddling. Close planting of 45-day old seedlings in case of medium duration varieties and 60-70 day old seedlings in late varieties should be done. There should be 60-65 hills/m². Instead of 2 to 3 seedlings, 4 to 5 seedlings/hill should be planted. Adequate fertilizer should be applied at transplanting.
- When seedlings are insufficient, seedlings may be raised by dapog method.

<table>

  • Earthing up for erect and semi erect types
  • Second weeding in spreading types 30 days after sowing is necessary
  • Pre-planting application of herbicides viz., Fluchloralin @ 1.0 kg (a.i.)/ ha or Metolachlor @ 0.75 kg (a.i.)/ ha or Pendimethalin @ 1.0 kg (a.i.)/ha or Oxadiazon @ 1.0 kg (a.i.)/ ha or Thiobencarb @ 1.0 kg (a.i.)/ ha or Butachlor @ 1.0 kg (a.i.)/ ha in moist soil at 1 day before sowing by mixing with 1000 l/ ha of water. Light hoeing should be given for incorporation of herbicide in the soil to avoid loss through volatilization and photo decomposition
• **Some other important practices:**
  • Depth of sowing–5 cm
  • Use seed drill and seed rate for erect type in *kharif*
  • Application of gypsum @ 250 kg/ha close to the base of the plants at 20-25 days after sowing on either side and incorporated in the soil so that it remains in top 3 cm of soil
Suitable cropping systems

- Groundnut + maize (3:1 or 2:1)
- Alternate crops – Mesta–AMV–1, AS–7
- Pearl millet – BPC-39, IP-417
- Soybean – JS – 1, Punjab –1
- Turmeric – Sudarshan
- Ginger – Nadia

Farm implements/tools:

- Bishu mould board plough for preparatory tillage
- Gujarat state fertilizer corporation seed drill for seeding in finger millet
- Implement factory seed – cum fertilizer drill for line sowing of upland rice
- Mould board plough: Suitable for primary tillage (1st and 2nd ploughing). Requires a Pair of bullock and covers 0.3 ha/ day. Rs.252/-
- Heavy soil plough: Suitable for black cotton soil. Requires a Pair of bullock and covers 0.24 ha/ day. Rs.324/-
- Cast iron plough: Suitable for ploughing and puddling in fields free from roots of trees and pebbles. Requires a pair of bullock and covers 1.0 ha/ day. Rs.266/-
- Zig-zag puddler: Puddling. Requires a pair of bullock and covers 1.0 ha/ day. Rs.1788/
- IADP Pubbler: Pulverizing light sandy loamy soil, puddling, suitable for heavy soils of western Orissa. Requires a Pair of bullock and covers 1.0 ha/ day. Rs1700/-
- Puddler 99: Pulverising all soils, puddling. Requires a pair of bullock and covers a 1.0 ha/ day. Rs.1232/
- One row seed drill: Seed sowing in rice, maize and groundnut. Requires a pair of bullock and covers 0.3 ha/ day. Rs.246/-
- Two row multicrop seed drill: Seed sowing in rice, wheat, groundnut and bangalgram. Requires one man and covers 0.5 ha/ day. Rs.1164/-
- Two row mustard seed drill: Mustard sowing. Requires one man and covers 0.5 ha/ day.Rs.827/-
- Three row multicrop seed drill: Seed sowing in rice, wheat, bangalgram and groundnut. Requires one man and covers 0.8 ha/ day. Rs.1570/-
- Paddy transplanter (Manual): Transplanting paddy with proper spacing. Requires two men and covers 0.20 ha/ day. Rs.4000/-
- Pedal paddy thresher: Threshing of paddy. Requires two men and covers 2.5 q/ day. Rs.2754/-
- Power paddy thresher: Threshing of paddy. Requires Electric motor (1 HP) and covers 10-12 q/ day. Rs.8778/- (With motor and starter)
- Groundnut digger: Digging groundnut. Requires pair of bullock and covers 0.3 ha/ day. Rs.548/-
- Pedal groundnut thresher: Separating groundnut pods from the plants. Requires two men and completes 2.2 q pods/ day. Rs.2818/-
- Groundnut decorticator: Spreading seeds from groundnut pods. Requires One men and completes 50 kg/ hour. Rs.764/-
- Maize sheller: Spreading seeds from maize cobs. Requires one man and completes 1.0 q/ day Rs. 25/-
Alternate farming systems

• Agro-horti system: Sweet potato + maize/ castor (spacing 80 x 25 cm)
  • Yam (100x60 cm) + maize/ castor
  • Tapioca (100x100 cm) + maize/ castor
  • Colocassia (80x25 cm) + maize/ castor

• Alley cropping: Subabul (4 m interval) + groundnut/ sesame/ cowpea (grain)

• Fodder/ Green biomass: Dalberia sissoo, Albizzia lebbeck, Anogeissus latfolia, Sesbania, Stylo, Marvel – 8 grass

• Fruit: Ber, Custard apple, Pomegranate, Amla + kharif spreading crops.

• Medicinal and aromatic plants: Catharanthus roseus, Palma rosa, Vetiveria zizanoides, Rose, Geranium

• Vegetables: Onion, Tomato, Okra, Cowpea, Cluster bean, Drumstick

Non – arable wastelands:

• Tree farming (Sal, Teak)
• Silvipastoral system (Shisham/ Subabul/ Gambar + Stylo/ Cenchrus/ mixture)

Arable wastelands:

• Agri-horticulture: Fruit crops (mango/ citrus/ sapota/ pomegranate/ custard apple/ amla/ litchi/ jackfruit/ phalsa) + field crops (pulses/ oilseeds). Hybrid mango varieties viz. Pusa Amrapalli and Pusa Mallika are becoming increasingly popular in the zone.

• Alley cropping: Leucaena + turmeric/ ginger

Contingent planning

Normal season

• Rice:
  • Very early group (less than 95 days): Heera, Rudra, ZHU 11-26, Vandana
  • Early group (95 to 115 days): Pathara, Kandagiri, Udayagiri, Ghanteswari and Parijat
  • Early medium (115 to 120 days): Sarathi and Bhoi
  • Medium duration (125 to 145 days): Lalat, IR-64, Konark, Gajapati, Surendra, Jajati, Swarna, MTU-1001 and Padmini
  • Late duration: Utkalaprava, Gayatri, Savitri, Prachi, Ramachani, Mahanadi and Indrabati

• Fingermillet: Dibyasinha, Nilachala, Bhairabi and Subhra

• Maize: Navjot, Vijaya, DHM-103 and Ganga-5

• Greengram: PDM-54, K- 851, Dhauli and TARM-2

• Blackgram: Pant U-30, T-9 and Sarala

• Pigeonpea: UPAS-120, R-60, T-21 and S-5

• Cowpea: SEB-2, SGL-1 and Arka Kamal

• Horsegram: Urmi and Local

• Groundnut: Smruti (OG 52-1), JL-24, ICGS-11 and AK 12-24

• Castor: Aruna, DCH-177 and DCH-30
• **Rapeseed mustard**: PT-303, M-27, Parvati and Anuradha
• **Sesame**: Vinayak, Uma, Usha and Prachi
• **Niger**: Deomali (GA-10), IGP-76 and Phulbani Local
• **Linseed**: Kiran, Laxmi-27, Pusa-3 and Padmini
• **Sunflower**: Morden
• **Cotton**: MCU-5, NHH-44, Somanath, Savita and Bunny
• **Ginger**: Vardhan, China and Nadia
• **Turmeric**: Sudarsan, Suguna, Subarna and Rajendra Horti-5.
• **Yam**: Hatikhoja, Srikirti and Srirupa

**Aberrant weather: Upland**

**Early season drought/Delay in onset of monsoon:**

When upland rice is completely damaged, the crop may be cut down for supplying straw to the cattle. Non-paddy crops viz. fingermillet (Subhra, Bhairabi, Dibyasingha and Godavari), greengram (K 851, PDM-11 and PDM-54), blackgram (T-9, Sarala and Pant U-30), cowpea (SEB-2, SGL-1, Arka Kamal), horsegram (Urmil), ricebean (RBL 6), sesame (Usha, Uma), castor (Aruna, DCS-9), niger (IGP-76 and Deomali) or sunflower (Morden) should be taken. Drought tolerant varieties of crop(s)/cropping system(s) should be taken up. The crop /variety should be selected based on available effective growing season.

**Mid-season drought:**

Weeding and hoeing should be done in all the crops except groundnut in flowering stage. Weeds in groundnut should be cut or uprooted not to interfere in pegging and pod formation. Hoeing creates soil mulch and decreases moisture loss from the soil. Uprooted weeds should be used as mulch between crop rows.

• Foliar spraying of 2% urea in upland rice and fingermillet gives good results. For this, 200 g of urea is mixed with 10 l of water and sprayed on the foliage of the crop. Plant protection chemicals may be mixed with urea solution to minimize the cost of spraying. In a single spray 10 kg/ha of urea is applied through 500 l solution.

• Excess plants in the crop row should be thinned to reduce moisture loss from the soil.

• Use of tender twigs of *Leucaena*, *Gliricidia sepium*, *Cassia siamea* and *Mimosa invisa* and plants of sunhemp as mulch-cum-manure reduces evaporation loss from the soil.

• Spraying of planofix 10 ppm at 45 days after sowing and 20 ppm at flowering in cotton to prevent fruit drop.

**Late season drought:**

• Harvested rain water should be recycled as life saving irrigation.

**Medium lands and low land:**

**Direct sown rice:**

• Re-sowing of rice is needed if plant population is less than 50%. Line sowing of pre-germinated seeds of rice (125 days duration) should be done. Nursery for comparatively shorter duration rice varieties may be done.

• If plant population is more than 50% and ‘beushaning’ is not possible, weeds are uprooted by manual means. Even distribution of plants (*Khelua*) should be taken up immediately by using local tools. tillers with roots may be detached from hills with profuse tillering for planting in gappy areas. Urea solution (2%) may be sprayed to improve crop growth.
Transplanted rice:

- If puddling and transplanting is not possible, seedlings should not be uprooted. Weeds are removed to keep the nursery beds clean. Adequate plant protection measures are taken to protect the seedlings from disease and pest attack.

- When rainfall occurs, puddling is done by tractor drawn power tiller or rotovator for better puddling. Close planting of 45-day old seedlings in case of medium duration varieties and 60-70 day old seedlings in late varieties should be done. There should be 60-65 hills/m². Instead of 2 to 3 seedlings, 4 to 5 seedlings/hill should be planted. Adequate fertilizer should be applied at transplanting.

- When seedlings are insufficient, seedlings may be raised by dapog method.
RAJASTHAN

In Rajasthan there is one district viz. Sawaimadhopur under low runoff and medium yield gap region and one district viz. Chittorgarh under medium runoff and low yield gap region.

<table>
<thead>
<tr>
<th>District</th>
<th>Region</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chittorgarh</td>
<td>Medium runoff and Low yield gap</td>
</tr>
</tbody>
</table>

**Agroecological setting**

- **Climate**: Hot moist / dry semi arid
- **Physiography**: East Rajasthan uplands
- **Soils**: Deep loamy grey brown and alluvium - derived soils, deep clayey black soils, shallow black soils (Vertic Inceptisols–100%)
- **Annual rainfall**: 885 mm
- **Potential evapotranspiration**: 1556 mm
- **Moisture availability period**: 90-150 days

**Soil and water conservation**

- More emphasis on *in situ* water conservation
- Increasing soil infiltration capacity and reducing soil crusting problem
- Contour furrowing
- Absorption terracing
- Contour trenches
- Inter-row water harvesting
- Inter-plot water harvesting of 1:1 cropped to un-cropped land
- Dead furrows at 3.6 m intervals
Crop management

- Varieties:
  - Spreading: RS-1, M-13
  - Bunch: JL-24, HNG - 10
  - Semispreading: RSB-87

- Seed rate: 100 kg/ha
  - Bunch: 100 kg/ha
  - Spreading: 80-100 kg/ha

- Sowing: first week of June to second week of June

- Planting pattern: 30x15 cm
  - Bunch: 30x10-15 cm
  - Spreading: 40-45X15 cm

- Nutrient management: 6 t FYM/ha + 25 kg N + 40 kg P₂O₅/ha + gypsum 250 kg/ha

- Pest management:
  - For sucking pests: Phosphamidon or Dimethoate spray
  - For termites: Chlorpyriphos 20 EC @ 6 ml/kg of kernels or Acephate 75 SP @ 6 g/kg of kernels
  - For white grub: treat with cholopyriphos 20 EC 1l/40 kg seed kernel.

Weed management:

- Pre-emergence application of Pendimethalin @ 0.5 kg a.i./ha

Suitable cropping systems

- Groundnut + sesame (6:2 row ratio at 30 cm apart)
- Groundnut (J-11) + castor (GAUCH-1) (3:1 or 6:1 ratio)
- Cotton (G.cot–10) + groundnut (J-11)
- Groundnut + pigeonpea (3:1)

Farm implements/ tools

- Arjia Pora: Placement of seed and fertilizer at proper depth. Rs.100/-
- Multipurpose tool bar: Ridge making, interculture, blade harrowing and seed and fertilizer drilling. Rs.2000/-
- Seeding attachment for ridge sowing: Ridge sowing of maize. Rs.300/-
- Dryland weeder: Intercultural operations. Rs.500/-
- Rotavator-L-Series: The operations like ploughing, harrowing, clod crushing, leveling are done simultaneously. Rs.60000/-
- Two Row Seed Drill: Two row sowing at a time. Rs.1500/-
- Plough Planter: Placement of seed. Rs. 1500/-
- Post hold digger: Digging of pits for planting tree species. Rs. 40000/-
Alternate farming systems

Marginal lands

- **Silviculture**: *Acacia tortilis*
- **Land capability class III**: Alley cropping (Jatropha spp + Greengram)
- **Land capability class IV**: Silvipastoral system (*Prosopis cineraria* + *Cenchrus*)
- **Horti – Pastoral system**: Ber + *Cenchrus setigerus*
- **Fodder/ Green biomass**: *Ailanthus excelsa, Albizia lebbeck, Dalbergia sissoo, Azadirachta indica, Prosopis cineraria, Dichrostachys*
- **Fruit**: Ber, Date palm, Jamun, Fig, Phalsa, Koronda
- **Medicinal / Aromatic plants**: *Plantago ovata, Cassia angustifolia, Safed musli, Papaver somniferum*
- **Vegetables**: Clusterbean, Cowpea, Amaranthus, Round melon, Long melon
- **Animal Component**: Male/ Female cattle, Female buffaloes, Sheep, Goat

Contingent Planning

**Good and normal rainfall**
- Grow large areas under improved varieties of cereals, pulses and oilseeds during *kharif* on heavy soils, conserve soil moisture during *kharif* and take a early *rabi* crop of rapeseed mustard or chickpea.

**Normal onset followed by long gaps in rainfall**
- Drought hardy crops with deep root system and low water requirement like sorghum, castor, pigeonpea and sesame should be preferred over maize.

**Delayed onset of monsoon:**
- Grow early maturing pulses (greengram, blackgram), oilseeds (sesame) and fodder crops (sorghum + cowpea). Intercropping of maize + blackgram/ pigeonpea, groundnut + sesame is recommended

**Early withdrawal of monsoon:**
- Conserve soil moisture received during last season and grow early *rabi* crops like rapeseed mustard, chickpea, safflower etc.

Early withdrawal of monsoon:
• Conserve the soil moisture received during last season and grow early *rabi* crops like rapeseed mustard, chickpea, safflower etc.
SUMMARY

Groundnut (Arachis hypogea L.) is an important oilseed crop and oil content of the seed varies from 44-50%, depending on the varieties and agronomic conditions. It is also used in soap making, and in manufacturing cosmetics and lubricants, olein, stearin and their salts. Kernels are also eaten raw, roasted or sweetened. They are rich in protein and vitamins A, B and members of the B₂ group. The cake can be used for manufacturing artificial fibre. The haulms are fed (green, dried or silaged) to livestock. Groundnut shell is used as fuel for manufacturing coarse boards, cork substitutes etc. Groundnut is also of value as a rotation crop. The production is concentrated in the four states of Gujarat, Andhra Pradesh, Tamil Nadu and Karnataka.

</table>

For kharif crop, with the onset of rains in May-June, the field is given two ploughings and the soil is pulverized well to obtain a good tilth. Harrows or tiller can be used for cultivation. It is sown as late as August or early September. If a field is infested with white grubs, chemicals, such as Heptachlor or Chlordane, are drilled at the rate of 25 kg/ha before final harrowing.

Well-filled kernels should be selected and treated with 5 g of Carbendazium or 3 g of Mancozeb per kg of kernels. The quantity of well-developed seeds required per hectare is about 100 kg for semi spreading and spreading varieties and 100-120 kg for the bunch varieties. The kharif crop is sown with a seed drill or with a suitable planter at a depth of 8-10 cm. for semi spreading and spreading varieties, the spacing between the adjacent rows varies from 30-60 cm and within the row from 10-15 cm. For rainfed bunch groundnut, the inter-row spacing vary between 20 and 30 cm and the intra-row spacing between 10 and 20 cm.

Fertilizer recommended for rainfed crop is 6.25 tonnes farmyard manure and 10-25 kg nitrogen (N), 20-40 kg phosphorus (P₂O₅) and 20-40 kg potash (K₂O) per ha. The application of N should be made in two equal split doses, one before sowing and the other 30 days after sowing. The application of a culture of Rhizobium as seed treatment is beneficial in increasing nodulation and nitrogen fixation. Application of gypsum at 500 kg/ha at the pegging stage will enhance pod formation.

The Integrated Pest Management (IPM) Module in Groundnut developed by National Research Centre on Groundnut, Junagadh is given below.

**Integrated Pest Management Module:**
- Seed treatment with Carbendazim (2 g/kg of seeds) for controlling seed borne fungi
- Soil amendments with castor or mustard or neem cake @ 500 kg/ha (15 days before sowing) for controlling soil borne diseases like stem rot and collar rot.
• Intercropping of groundnut with pigeonpea/ pearl millet/ sorghum (3:1) for management of foliar fungal diseases

• Use of trap crops such as cowpea, soybean, or castor as border crop for sucking/ defoliating insects. Single hand weeding after the application of pre-emergence weedicide Fluchloralin @ 1.5 kg a.i./ha is effective for weeds management.

• Biocontrol by using of commercially available preparations of *Trichoderma* sp. For seed treatment @ 4 g/kg seed or soil application @ 25 to 62.5 kg/ha (for controlling stem rot and seed rot and application of Bt (*Bacillus thuringensis* @ 300-500 g/ha) between 45 and 60 days of sowing for controlling Spodoptera and Helicoverpa; use of pheromone traps for *Spodoptera* (10 traps/ha), Helicoverpa (10 traps/ha) and leaf miner (25 traps/ha). Need based foliar spray of crude neem oil @ 2% in Teepol (for both foliar fungal and sucking pests), fungicides (0.05% Carbendazim + Mancozeb 0.2%) at 45 and 60 days after sowing for major foliar fungal diseases like early and late leaf spots and rust.

• **Late leaf spot**: Spray Mancozeb 2 g + Carbendazim 1 g/l or hexaconazole @ 2 ml/l. Spraying can be taken up based on leaf wetness at 70 days after sowing. There is no need to spray for July sown crop.

• **Stem necrosis**: Removal of weeds particularly Parthenium on the bunds and in the field.

• **Varieties for rust tolerance** – Vemana (K-134), Tirupati–4

The Integrated Disease Management (IDM) Module in Groundnut was suitably integrated in the integrated pest management package developed at National Research Centre on Groundnut, Junagadh for the holistic management of diseases, insect-pests and weeds.

**Integrated Disease Management Module:**

One spray each of 2% aqueous neem leaf extracts, a mixture of Carbendazim (0.02%) and Mancozeb (0.2%) and culture filtrate of *Penicillium islandicum* was effective in reducing intensity of late leaf spot and rust.

**Cultural practices**

• Soil amendment with castor cake @ 500 kg/ha (preferably 15 days before sowing) for soil borne diseases like stem rot and collar rot.

• Intercropping of groundnut with pigeonpea/ pearl millet/ sorghum (3:1) depending upon the locally recommended intercrops against foliar fungal diseases (early and late leaf spots, rust) and insect pests (leaf miner and thrips).

• Use of trap crops such as cowpea/ soybean (leaf miner and leaf hoppers)/ castor (Spodoptera and leaf hoppers) as border crops for sucking/ defoliating insects.

• One hand weeding at 30-35 days after sowing after the application of pre-emergence weedicide Fluchloralin @ 1.5 kg a.i./ha

**Biological control**

• One foliar spray of culture filtrate of *Penicillium islandicum* (50%) at 70 days after sowing.

• Nuclear polyhedrosis virus for the management of Spodoptera and Helicoverpa @ 250 LE/ha)

• Spray of aqueous neem leaf extract (2-5%) for the management of leaf spots and rust.

• Spray of neem seed kernel extract (5%), or crude neem oil (2%) against defoliators, sucking pest and foliar pathogens.

• Release of *Trichogramma chelorsi* @ 50000/ha, two times at 7-10 days interval followed by release of *Bracon hebetor* @ 5000/ha, two times at 7-10 days against leaf miner and defoliators.

• Pheromone traps @ 10 traps/ha for Spodoptera and Helicoverpa and 25 traps/ha for leaf miner.
All India Coordinated Research Project for Dryland Agriculture (AICRPDA)

- Spray of Bt (*Bacillus thuringensis*) @ 300-500 g/ha against red hairy caterpillars.
- Seed treatment with *Trichoderma viridae/ T.harzianum* @ 25-62.5 kg/ha, preferably in conjunction with organic amendments such as castor cake or farm yard manure.

For controlling weeds, and also to keep the soil in a friable condition, the crop should generally receive a hand-weeding and one or two hoeings, with bullock-drawn implements, the first about three weeks after sowing and the second and the third about a fortnight and a month later. No interculture would be done after the pegs have commenced going underground. Earthing up can be done in the case of bunch and semi-spreading types to facilitate maximum penetration of pegs into the soil. Weeds can also be controlled effectively with Fluchlocralin or Pendimethalin @ 1.5 kg ai k/ha weedicide at the rate of 5 l in 500 l of water per hectare as a pre-emergence soil spray within two days of sowing groundnut.

**Some important pests are:**

**Leaf-miner**
- Caterpillars mine the tender leaves and later fold the adjacent leaves to feed within. Pest active during July to December; drought, with occasional showers favourable.
- Dust 4% Carbaryl

**Groundnut aphid**
- Vector of a virus disease (rosette), dry and warm weather, favourable.
- Spray 0.03% Dimethoate or Phosphamidon, Monocrotophos or Methyl-demeton

**White grub**
- The adults emerge immediately after the monsoon; grubs feed on roots and kill the plants.
- Application of 10% Phorate granules is effective to kill grubs.

**Diseases**

**Root rot**
- Reddish brown discolouration on the stem, spreading and the plant collapsing, tissues blackened and numerous tiny black sclerotia are formed.
- Practise crop rotation, treat seed with Carbendazim @ 2 g/kg

**Tikka disease or leaf spot**
- Dark spots surrounded by a bright-yellow ring on the leaves and sometimes on the petiole and the stem; premature leaf shedding is characteristic.
- Spray with Brestan or with 4:4:50 Bordeaux mixture or with 0.2% Ziram or Zineb or Maneb.

**Bunchy top**
- Leaves reduced in size and malformed; suppression of the internodes; partial sterility.
- Use well-developed disease free seeds, rogue out diseased plants.

If the *kharif* crop is caught in a long spell of drought, especially at the pod-formation stage, supplemental irrigation is given. The peg-formation stage is critical.

**Harvesting**

Harvesting of groundnut should be done at appropriate maturity. Blackening of inner shell and development of testa colour are the common indicators of maturity. Over maturity affects the quality of groundnut. So harvesting should be done at 80% pod maturity.

**Drying**

At the time of harvesting, groundnut pods usually have moisture content around 40% at physiological maturity. Therefore, proper drying is necessary to bring the moisture level to 10%. Generally small farmers strip off the pods soon after harvest and carry home the produce for drying. Where holdings are large, plants are kept in the field in small heaps for sun drying before stripping off pods with mechanical threshers.
Farmers usually dispose of their groundnut pods within 3-4 weeks after harvest, although rich farmers store the pods for 3-4 months.

**Storage**

Rapid loss of seed viability is a perpetual problem in post rainy season groundnut. Farmers are not able to carry over seed from one post rainy season to another unless the following low cost technology is implemented.

- Delay of harvest after giving the last irrigation to bring down the pod moisture to a desirable level.
- Harvesting the crop at physiological maturity
- The pod should give a rattling sound at the time of stripping.
- Slow drying of plants in the shade with their pods intact
- Bringing down the pod moisture to the level of 8-9% by regular drying
- Following of NRCG storage method where dried pods are stored in polythene-lined gunny bags along with calcium chloride at 250 g for a 30 kg bag. The calcium chloride should be placed in a wide-mouthed plastic bottle with pores in the upper portion. This method keeps up to 80% of seed viable for a period of 8-10 months. This technology has solved the farmers’ problem in the areas where groundnut is only grown in rice-fallows during the post rainy season.

In India, machines available for shelling, threshing and digging are popular with groundnut farmers. Particularly in Saurashtra region of Gujarat equipment like planters, which can maintain plant-to-plant spacing within a row, wet threshers, and graders are in demand. The groundnut planter developed by CRIDA, Hyderabad is reported to be ideally suited for sowing groundnut in sandy loam soils and can regulate spacing both between rows and between plants within the row.

**Prioritized cultural options are** -

Issues and strategies in groundnut in different agro ecoregions are as follows:

**Issue:** Characterization of the production system

**Focus:** Non-realization of existing yield potential/attainable yield in majority of the traditional groundnut areas.

**Strategies:**

- The rainfed traditional system being basically risk prone, especially because of the relatively high cultivation cost of groundnut, the crop management strategy to be developed should be efficient, low input demanding and less risk prone.
• In the rainfed system, the economic- and ecological-sustainability are at stake and so a major attention has to be paid on integrated pest-nutrient- and water- management systems.

• With the efforts made under Technology Mission on Oilseeds by the GOI, two things have occurred. The farmers have better minimum support price. Consequently, they started using more external inputs for obtaining better yields.

**Issue:** To increase crop yield ceilings

**Focus:** Stagnation of overall groundnut productivity within a narrow range, instability of production and productivity.

**Strategies:**

Strengthening the breeder seed production system by addressing the weak links in the present system

• In all 85 improved varieties have so far been identified, of which 17 are runners and 40 are Spanish bunch.

• The stagnation of yield level due to non-exploitation of yield potential of available varieties is an issue to be solved by optimum management.

• Enhancing yield potential itself will have to be achieved by two strategies. One will be to sustain the yield potential by introducing resistance to various stresses and the other will be to enhance the yield potential itself. Substantial amount of work has been done with the first strategy but the success obtained so far is a moot question.

• Some of the problems like high vegetative growth, and high incidence of foliar diseases which are peculiar to these areas, need special attention.

**Issue:** To improve crop management for higher Productivity

**Focus:** Boosting groundnut farming in the non-traditional areas. Diversification in cropping systems

**Strategies:**

• A large chunk of groundnut needed for diversification of domestic food industry (still at its infancy) and export has to come from a specialised cultivation system with assured inputs and management to maintain quality and returns. Cultivation has to be a commercial venture with high inputs and high returns in specially identified areas. Thus, the technology to be developed will need an approach substantially different from that needed for low-input rain-dependent system.

• The farmers in western India (Gujarat) prefer runner types at the start of the season and move to bunch varieties with delay in sowing. The farmers in south shifted to bunch varieties. The Gujarat Agricultural University argues that semi-spreading varieties with slightly extended season over the bunch varieties could be a solution.

• An important way to minimize the risk and enhance the efficiency in resource utilization is to develop well defined and economically viable intercropping systems, one based on groundnut and the other based on the wide-spaced crops like cotton. Such intercropping systems will stem the decline in groundnut areas and offer a possibility of expanding the area under groundnut.

• Relay intercropping is a practice evolved by the farmers of Saurashtra. It is very enterprising. The farmers sow groundnut as a rainfed crop and take up either pigeonpea or castor after 6-7 weeks as an intercrop. After the harvest of groundnut, these intercrops are provided with supplemental irrigations, number being less for pigeonpea.

• We need to optimise the system. Among others, the inputs include nutrient management, irrigation management, from harvested, water pest management, implements etc.

**Issue:** To increase seed availability

**Focus:** Production of quality and quantity seed as endogenous input
Strategies:
• While all have shown that improved variety is the key for higher productivity still the farmers do not
have adequate access to these improved varieties. They largely call the varieties under two different
categories, namely, runner type and bunch type. So there should be a deliberate effort of the Universities
and the State Seed Corporations to generate more of the improved seed for further enhancing the
productivity of the groundnut crop. These efforts should continue.
• Quality seeds of these varieties can be directly produced in the farmers’ fields under the coordination
and supervision of the NRCG, the oilseed cooperatives, NDDB, State Seed Agencies under an already
formulated Crash Program.

Issue: To manage soil for sustainable higher productivity
Focus: Improving soil fertility with endogenous inputs

Strategies:
• The research has not addressed a very important problem of research, i.e., monitoring soil health with
continuous cropping of groundnut over years like low pH, Al-toxicity etc.
• At the same time, the secondary problems like other nutrient deficiencies like calcium in alfisols need attention.
• Participatory Technology Development (PTD) is on utilization of FYM + Mussouriephos + Phosphoactaria;
Gypsum; Magnasite etc.

Issue: To reduce losses due to pests and diseases
Focus: Integrated Pest Management

Strategies:
• Participatory IPM package development: ODA/IFID (UK) for Mysore (AESR 8.2) through NGO (Agriculture
Mankind Ecology, AME) by Participatory Technology Development (PTD) is as follows:
  • Seed + Trichoderma
  • Install ICRISAT light meter
  • If value exceeds 312 Spray M-45
  • Pheromone traps
  • Watch ET >10 moths/night/trap
  • Place egg parasitoid cards @ 13/ha
  • Repeat 15 days later

Issue: Post harvest value addition
Focus: Diversification of uses

Strategies:
• Diversified value added products of groundnut with a special emphasis on export
• The problem of aflotoxin and poor quality haulms for fodder.

Issue: Field efficient implements
Focus: Improved implements are not within the reach of majority of the farmers

Strategies:
• The seed cum ferti planters, diggers, decorticators etc. need improvements to become farmer friendly
and for repairs by local mechanics, artisans etc.
Issue: To improve productivity of livestock by integrating with alternate land use

Focus: Integrating livestock and alternate land use system

Strategies:

• A good opportunity to use vegetatively propagated perennial wild relatives of groundnut, as fodder and forage crop also exists. Their cultivation in degraded lands can be explored.

Issue: Socio-Economic Policies

Focus: The availability of seed is the most important constraint identified in the region.

Strategies:

• Hence a seed production net work, specially involving the eastern and north-eastern states has to be developed.

• The farmers also need to be encouraged to grow the seed in the off-season to meet the requirements of the village.

CARBOSULPHAN 25% DS: Marshal (Rallis)
CHLORPYRIPHOS 20 EC, 10 G, 1.5 DP: Coroban (Coromandal Indag), Blaze (Indofil), Dursban, Ruban (De’Nocil), Sulban (Sulphur Mill), Specphos 20 (Southern Pesticides), Hyban (Hyderabad Chemicals), Radar (Searle India), Nuklor 20EC (Dupont), Corocin (IOCL), Scout (AIMCO), Dhanwan 20 (Dhanuka), Durmet 20EC (Cyanamid Agro), Classic (Lupin), Starban (Shaw Wallace), Doomer (Bhaskar Agro), Hilban (Hindustan Insecticides), Tagban 20 EC (Tropical Agro), Cyphos (ICI-Zenica), Tarkash (BASF), Force (NFCL), Pyrivol (Voltais), Hexaban (Parry Chemicals), Agro-Chlore (Gujarat Agro), Chlorguard (Gharda), Tafaban, (Rallis), Strike (Wockhardt), Robust (Sabero)
CYPERMETHRIN 10 EC: Ralothrin (Rallis), Ankush (BASF), Simper (ICI-Zeneca), Hi-Power (Sulphur Mills), Spec Cyperin (Southern Pesticides), Hycyper (Hyderabad Chemicals), Cyper Top (Thakar Chemicals), Lacer (Searle India), Agro-Cyper (Gujarat Agro), Jawa (Dupont), Cypercin (IOCL), Super Killer (Dhanuka), Cypermil (Montari), Polytrin (Novartis), Cypriod (AIMCO), Challanger (Tropical Agro), Cilcord (De’Nocil), Starcip (Shaw Wallace), Volcyper (Voltais), Cypermar (Parry Chemicals), Hilcyperin (Hindustan Insecticides), CYPERMETHRIN 25 EC: Cymbush (ICI-Zeneca), Ralothrin (Rallis), Cypersul (Sulphur Mills) Spec Cyperin (SPEC), Angel (Hyderabad Chemicals), Cyper Top (Thakar Chemicals), Trofy 25 EC (Searle India), Cypercin (IOCL), Challanger (Tropical Agro), Cypermil (Montari), Cyperguard (Gharda Chemicals), Polytrin (Novartis), Cypriod (AIMCO), Cilcord (De’Nocil), Colt-25 (Pesticides India), Volcyper (Voltais), Shakti (Lupin), Basathrin(BASF),
Hilcyperin (Hindustan Insecticides), Cybil (Bayer), Cyrex (United Phosphorus), White Gold (Newchemi), Panther (Bhaskar Agro Chemicals), Blaze (Indofil), Super Killer (Parry Chemicals), Starcip (Shaw Wallace), Super Killer (Dhanuka), Baadha (Sabero)

DIAZINON 20 EC, 10% Gr: Basudin (Novartis), Tik-20 (Rallis)

DICHLOROVOS 76 EC: Nuvan (Novartis), Vapona (De’Nocil), Sualchor (Sudarshan Chemicals), Specvos (SPEC), Dicotop (Thakar Chemicals), Amidos (AIMCO), Doom (United Phosphorous), Luvon (Lupin), Hilfol (Hindustan Insecticides), Divap 100 (Pesticides India), Marvex Super (Parry Chemicals), Agro-DDVP (Gujarat Agro), Vantaf (Rallis)

DICOFOL 18.5 EC: Kelthane (Bayer), Difol (Sulphur Mills), Hi Might (SPEC), Dilop (Thakar Chemicals), Tik-Tok (United Phosphorous), Hilfol (Hindustan Insecticides), Hycofol (Hyderabad Chemicals), Hexakil (Parry Chemicals), Dhanuka Dicofol (Dhanuka), Colonels (Indofil)

DIMETHOATE 30 EC: Tafgor (Rallis), Tara-909 (Shaw Wallace), Specgor (Southern Pesticides), Hygro (Hyderabad Chemicals), Tophoate (Thakar Chemicals), Parrydimate (EID Parry) Diadhan (Dhanuka), Milgor (Montari), Dimetox (AIMCO), Nugor (United Phosphorous), Primer (Bhaskar Agro), Tagor (Tropical Agro), Teeka (NFCI), Champ (Searle India), Hexagor (Parry Chemicals), Hilloate (Hindustan Insecticides)

ENDOSULFAN 35 EC & 4% D, 2% D: Thiodian (Agro Evo), Endocel (Excel), Endosul (Sulphur Mills), Endostar (Shaw Wallace), Dawn (Southern Pesticides), Hysulfan (Hyderabad Chemicals), Top Sulfan (Thakar Chemicals), Endocin (IOCL), Parry Sulfan (E.I.D. Parry), Endonil (Montari), Endosol (AIMCO), Thiokill (United Phosphorous), Lusulfan (Lupin), Agro Sulfan (Gujarat Agro), Hildan (Hindustan Insecticides),Tagsulfan (Tropical Agro), Hexasulfan (Parry Chemicals), Endotaf (Rallis), Speed (NFCL), Devigor (Devi Dayal)

FENITROTHION: Sumithion (Rallis), Folithion (Bayer), Hexafen (Parry Chemicals)

FENVALERATE 20 EC 0.4% DUST: Fenval (Searle Inida), Bilfen (Bayer), Starfen (Shaw Wallace), Fenfen (Parry Chemicals), Topfen (Thakar Chemicals), Tagfen (Tropical Agro), Trump Card (Dhanuka), Hilfen (Hindustan Insecticides), Fencron (Novartis), Sumitox (AIMCO), Fenkill (United Phosphorous), Lufen (Lupin), Starfen (Shaw Wallace), Agrofen (Gujarat Agro), Bhaskarfendh (Bhaskar Agro), Newfen (Gharda), Kfenkem(New Chemi), Anchor (ICI-Zeneca), Fenny (NFCL), Viper (SPEC), Milfen (Montari), Taten (Rallis), Fennock 20 (De’Nocil), Bhasma (Wockhardt)

FIPRONIL 0.3% Gr, 5% SC: Regent (Rhouné – Poulne), Tempo (Agr Evo)

FORMOTHION 25%: Anthio (Novartis)

LINDANE (GAMMA-B.H.C.) 1.3%, 20%EC: Higama (SPEC), Lintox (AIMCO), Lindstar (Shaw Wallace), Lintaf (Rallis)

MALATHION 50 EC: Dhanuka Malathion (Dhanuka), Cythion (Cyanamid Agro), Sulmathion (Sulphur Mills), Specmal (SPEC), Agromafa (Gujarat Agro), Malatop (Thakar Chemicals), Hisama (Hindustan Insecticides), Malamar (Parry Chemicals), Luthion (Lupin), Malataf (Rallis), Maltox (AIMCO)

MONOCROTOPHOS 36% SL: Nuvacon (Novartis), Monocil (De’Nocil), Monoval (Voltas), Atom (Indofil), Sufos (Sudarshan Chemicals), Monostar (Shaw Wallace), Specron (Southern Pesticides), Hycrophos (Hyderabad Chemicals), Topcil (Thakar Chemicals), Monocil (IOCL), Monochem (New Chemi), Paryphos (EID Parry), Milphos (Montari), Monodhan (Dhanuka), Phoskill (United Phosphorous), Luphos (Lupin), Kadett (PesticidesIndia), Agromonark (Gujarat Agro), Moncar (Bhaskar Agro), Azodrin (Cyanamid Inida), Hyclon (HindustanInsecticides), Macrophen (Tropical Agro), Croton (Searle India), Balwan (Rallis), Monophos (Parry Chemicals), Monocron (NFCL), Corophos (Coromandel Indag), Bilphos (Bayer), Monosect (Arg Evo)

METHYL-PARATHION 50 EC: Metacid (Bayer), Parataf (Thakar Chemicals), Dhanumara (Dhanuka), Milion (Montari), Paratox (AIMCO), Luthion (Lupin), Devilthion (Devidayal), Tagpar (Tropical Agro System), Paramar M. (Parry Chemicals), Agro-Para (Gujarat Agro), Parataf (Rallis)

METHYL-PARATHION DUST 2%: Folidol (Bayer), Parataf (Sulphur Mills), Dhanudol (Dhanuka), Paratex (AIMCO)

OXY-DEMETON METHYL 25 EC: Metasystox (Bayer), Hexasystox (Parry Chemicals), Dhanusystox (Dhanuka), Mode (Agr Evo)
PHORATE 10 G: Thimet (Cyanamid Agro), Foratox (Pesticides Inida), Volphor (Volrho), Starphor (Shaw Wallance), Specphor (SPEC), Forcin (IOCL), Dhan 100 (Dhanuka), Milate (Montari), Granutox (AIMCO), Umet (United Phosphorous), Luperate (Lupin), Agro-Phorate (Gujarat Agro), Helmet (Tropical Agro Chemicals), Warrant (Searle India), Hilphorate (Hindustan Insecticides), Grenades

PHOSALONE 35% EC & 4% Dust: Zolone (Rhone-Poulenc), Volts Phosalone (Volts)

PHOSPHAMIDON 85 S.L.: Dimecron (Novartis), Cildon (De’Nocil), Sumidon (Sudershan Chemicals), Hydan (Hyderabad Chemicals), Topcron (Thakar Chemicals), Aimphon (AIMCO), Umeson (United Phosphorous), Phamidon (Lupin), Agromidon (Gujarat Agro), Hawk (Hindustan Insecticides), Specmidon (SPEC), Rilon (Rallis)

QUINALPHOS 25 EC: Ekalux AF (Novartis), Quinaltaf (Rallis), Flash (Indofil), Quinal (Shulphur Mills), Suqin (Sudershan Chemicals), Quinguard (Gharda), Starlux (Shaw Wallace), Knock (Southern Pesticides), Hyquin (Hyderabad Chemicals), Ekaton (Thakar Chemicals), Smash (Searle India), Chemlux (New Chemi), Shakti (E.I.D. Parry), Dhanulux (Dhanuka), Quinafox (AIMCO), Kinalux (United Phosphorous), Vazra (Lupin), Agroquini (Gujarat Agro), Basquin (Bhaskar Chemicals), Specmidon (SPEC), Rilon (Rallis)

TRIAZOPHOS 25 EC: Ekalux AF (Novartis), Quinaltaf (Rallis), Flash (Indofil), Quinal (Shulphur Mills), Suqin (Sudershan Chemicals), Quinguard (Gharda), Starlux (Shaw Wallace), Knock (Southern Pesticides), Hyquin (Hyderabad Chemicals), Ekaton (Thakar Chemicals), Smash (Searle India), Chemlux (New Chemi), Shakti (E.I.D. Parry), Dhanulux (Dhanuka), Quinafox (AIMCO), Kinalux (United Phosphorous), Vazra (Lupin), Agroquini (Gujarat Agro), Basquin (Bhaskar Chemicals), Specmidon (SPEC), Rilon (Rallis)

Fungicides

AUREOFUNGIN 46.15% SP: Aureofungin Sol (Hindustan Antibiotics)
CARTAFOL 80%: Tolfat (Rallis)
CAPTAN 50%, 75% SP: Hexacap (Parry Chemicals), Captaf (Rallis), Dhanutan (Dhanuka), Deltan (Coromandel Indag)
CARBENDAZIM 50 WP, 5 Gr: Barvistin, Subeej (BASF), Zoom (United Phosphorous), Agni (EID Parry), Dhanusten (Dhanuka), Derusal (Agro Evo), Aimcozim (AIMCO), Bengard (De’Nocil), Hycarb (Hyderabad Chemicals), Calzin (Lupin), Benzin (Bhaskar Agro), Benfin (Indofil), Carzim (Lupin), Nirmool (Shaw Wallance), Diabaran (Pesticides India), Stere (Parry Chemicals), Zen (NFCL), Volzim (Volts), Agrozim (Gujarat Agro), Arrest (Searle)
EDIFENPHOS 50 EC: Hinosan (Bayer)
HEXCONAZOLE 5% EC: Contaf (Rallis)
MANCOZEB 75%: Dithane M-45 (Bayer), Uthane M-45 (United Phosphorous), Luzen (Lupin), Dhauka M-45 (Dhanuka), Hiltihane (Hindustan Insecticides), Shield (Pesticides India), Spic Mancozeb (Spic), Zeb (NFCL), Manzate (Dapal), Zebsbane (Rallis), Luzim (Lupin), Abic M45 (novartis), Aimcozeb (AIMCO), Agromanco (Gujarat Agro), Indofil M-45 (Indofil), Sparsh (Wockhardt), Saviour (De’Nocil)
PROPICONAZOLE: Radar (Rallis), Tilt (Navartis)
STREPTOCYCLINE: Streptomycin (Hindustan Antibiotics), Plantomycin (Aries Agrovet)
SULPHUR 85 W.P. & DUST: Sulfat (Rallis), Insulf (united Phosphorous), Dhanusulf (Dhanuka), Sulphosan (AIMCO), Thiovit (Novartis), Farmasulf (Shaw Wallace), Microsulf (Parry Chemicals), Sulfin M-20 (Gujarat Agro), Hexasul (Parry Chemicals), Sulcol, Wet-Sulf (Excel)
TRIDEMORPH 80% EC: Calixin (BASF)
THIRAM 75%: Hexathane (Parry Chemicals), Thiride (IEL), Vegfru thiram (Pesticides India)
ZINEB 75% W.D.P: Hexathane (Parry Chemicals), Discon-Z (AIMCO), Devizeb (Devidayal)
ZIRAM 80% WP, 27% CS: Cuman L. (Novartis), Hexazir (Parry Chemicals), Ziride (IEL), Vegfru Zitox (Pesticides India), Tagziron (Tropical Agro)
